## Japanese fifth is well on song

by Kevin Cahill  
DESPITE some shortcomings, the Japanese fifth generation project poses a serious threat to the computer manufacturers of the West. This is the view of SPL Insight director Bob Muller and his team of nine Insight members who recently completed an intensive study of the project in Japan, followed by 10 days in the US, examining the US response to the Japanese programme.

The team will shortly present a report on their trip to Brian Oakley, the head of the Alvey Project, which is the UK's multi-million pound response to the Japanese initiative.

In addition, Muller and SPL are organising a major world conference at the end of September in London to give wider currency to the results of the study tour in Japan and the US.

According to Muller the Japanese fifth generation project is really underway, with a total of about 300 people involved directly in the work of ICOT, the Institute

for the New Generation Computer Project.

ICOT has about 40 staff, but each on-site staffer is backed up by a complete team in the company from which they originate.

The £10 million or so of funding allocated to ICOT is being spent on hardware and not on salaries, and while all the companies share the information from ICOT, there is no subsequent lateral co-operation, Muller said.

A good example of the independent stance taken by the companies is the way Fujitsu, Hitachi and NEC, all participants in the scheme, are each independently producing competing vector processors, the true supercomputers and vital components of the fifth generation architecture.

The major shortcoming in the Japanese approach, according to Muller, was the apparent lack of any real work being carried out on knowledge-based systems, and on expert systems, two main elements of the final fifth generation project.

MULLER... Japanese "expect to dispense" with software engineering.

Despite the lack of detailed work however and perhaps the most ominous sign of all, was the fact that the Japanese expressed little or no interest in software engineering tools.

"They expect that using the new techniques will allow them to dispense with the need for such tools," Muller said.

## Market boom produces a dollar billionaire

by Kevin Cahill  
AMERICA's stock market boom, which began in August last year, has made fortunes for some and added spectacularly to the wealth of others, many of them from the computer industry.

Heading the league is David Packard, founder of Hewlett-Packard, who has accrued \$1.2 billion to his existing HP-based riches of \$900 million.

The analysis of winners in the roulette game of the stock market appears in next week's issue of *Fortune* magazine and shows 14 computer company executives among 53 people who have gained over \$100 million over the past 12 months on their existing shareholdings.

Top place goes to David Packard, who founded his company with less than \$600 in a one-car garage in 1939.

But Packard's amazing gain is closely followed by the \$599 million which his partner William R. Hewlett added to his fortune, and which gives him the No 3 slot in *Fortune's* table.

The seventh and ninth slots go respectively to H. Ross Perot of Electronic Data Systems who added \$412 million to his pile; and Dr An Wang the Chinese refugee who founded Wang Laboratories, who added \$357 million.

An Wang's son, Frederick K. Wang, executive vice-president of Wang Laboratories, adds \$183 million to the value of his shares at the age of 32.

Steve Jobs 28-year-old founder of Apple Inc., adds \$265 million to

the value of his shares for the number 16 slot, closely followed by ex-Apple chief executive Mike Markkula who makes the number 22 rung with a gain of \$222 million.

A less well known director of Apple, Henry E. Singleton with founder of Teledyne, has accumulated an extra \$178 million in his shares in both companies.

Other famous names are Irving Gould, Commodore International chairman who lives in the Bahamas. He is \$217 million rich. Immediately next in 26th position is Gordon B. Moore of Intel, who is \$208 million better off this year. Bob Galvin, the chief executive of Intel rival Motorola, comes 28th with a gain of \$193 million.

PACKARD... Dollar billionaire

## Lisa's in demand and Cork is buoyant

by Kevin Cahill  
OVERWHELMING worldwide demand for its Lisa has persuaded Apple to start early production of the model at its plant in Cork, Ireland.

Employees returning from annual leave last week went straight into the first phase of assembly of the new machine, and company management were pointedly referring to the spare acreage around the plant with a view to further expansion.

The demand for the Lisa comes none too soon for the Cork plant, which has faced a significant problem of overcapacity in the Apple III production line since late 1982.

Production plans at Cork were tied to market forecasts for Apple I deliveries in Europe, but the forecasts were not met.

Sales of the 111 fared little better in the US which caused leading analysts to predict that the company would withdraw the product this autumn. This has not happened and sales of the Lisa have eliminated the danger of lay-offs which have occurred at other companies such as Osborne (see back page).

Apple is introducing the Macintosh this autumn to compete in the \$400 to \$1,000 market and has already won large scale acceptance for a product built around Macintosh in US educational establishments.

The company is promising a raft of other products and the third quarter ended July 1 brought an 87% increase in sales world-wide, justifying the company's continued optimism.

With micro companies all around declaring losses, Apple showed its profits for the quarter up by 59% to \$24.2 million.

## Honeywell pairs up with Ericsson

by Donald Kennett

THE pairing of computer companies with telecommunications companies gathers pace with the announcement last week of a joint research and development venture by Honeywell and Ericsson Information Systems (EIS).

Co-operative deals have been signed between a number of computer and telecommunications companies including ICL and Mitec, IBM and Rolm, and Sperry and Northern Telecom. Philips and AT&T last week signed the final details of an agreement they

made in principle in January, which marks AT&T's first major move on to the international scene (see back page).

EIS president Haakon Ledin will be chairman of the US venture, Honeywell-Ericsson Development, which will develop private telecommunications and office automation products to be sold by both parent companies.

The plan is to start operations in October at sites already owned by the two parents.

Ericsson, whose US subsidiary is 50% owned by Atlantic Richfield, has a site in Anaheim, California, which has been developing US versions of its MD-110 digital PABX and Eriplex packet switch

for two years. Honeywell has a site in Dallas, Texas, which has been working on another PABX.

Ledin said: "Our presence in the US with active product design will be a major contribution to Ericsson's business."

The parent companies will have equal shares in the joint venture and will share its management equally. They expect to transfer 150 technical staff into the venture by early next year.

Honeywell chief executive and chairman Edson Spencer said that the technology and products gained through the agreement with Ericsson would enable his company to provide building owners and tenants with highly integrated communications and control systems. The systems would bring

LEDIN... "US move will be major contribution."

together environmental control, energy management, protection systems and voice, data and video communications.

"In addition, the fully integrated voice and data systems to be developed by the new company will provide a relationship between communications, data processing and office automation to support Honeywell's computer and office automation businesses," he said.

US-based Honeywell's activities in information systems, defence, aerospace and control systems

turned over \$5.5 billion last year. Swedish-owned Ericsson turned over \$2.6 million.

Honeywell has been working its way into telecommunications for some time and has already taken over several small US PABX suppliers. Ericsson took over the Swedish minicomputer manufacturer Datasab in the late 1970s and has been active in the office automation market, but has made a relatively small penetration of the US market.

See also back page.

## PoS supplier is set for the USM

REAL Time Control, the UK's largest supplier of point-of-sale systems, next Monday joins the Unlisted Securities Market with a capitalisation of £103 million. Broker Simon Coates says that there has been no trouble placing 75% of the stock before the listing begins, and expects the financial public to squabble for the remaining 25% of the equity available at 148p a share.

## Alvey director

CHRISTOPHER Barrow, technical executive with Plessey Office Systems, has been appointed director of the man-machine interface section of the Alvey Programme and started his new job this week. David Thomas has been confirmed as director designate of Information Technology at the Science and Engineering Council based at the Rutherford Laboratories. His new post will integrate with his directorship of the IKBS section of the Alvey Programme.

## BCS position

DONALD Davies, head of the data security section in the computer division of the National Physical Laboratory, takes over in October as vice president (technical) of the British Computer Society. John Ivinson is at present deputising in the post since David Butler of Butler Cox & Partners resigned for personal reasons.

## Chairman Maggie

MRS THATCHER is to chair a seminar which will discuss the ways in which basic research can be converted to high technology products. The seminar will be at Lancaster House on September 22. Up to 240 academics, scientists, industrialists, financiers and civil servants will be invited.

## Home control gadget wins Stirling over

by Donald Kennett  
US TOY maker Mattel has realised early home computer pundits' dreams of controlling domestic appliances. Its £80 Aquarius micro includes a home control system peripheral, which has won the approval of gadget-freak Stirling Moss.

"I have a house full of easy-going gadgets," he said when he came along to the launch to say how impressed he was. "I can even fill the bath just by pushing a button. But it appears that what we have here can do more than my system can - and would have saved me money."

Mattel stops short of supplying interfaces and devices to fill baths, nor does its system allow for cross control from different parts of the house as Moss's own 176 installed circuits do. But it does allow 256 devices or groups of devices to be switched on or off at pre-set times.

Systems of this type are enjoying a boom in the US. Mattel scores in

the software that supports setting up the system. Diagrams of each room in a house can be displayed in turn. The user enters symbols and settings for each device on a grid of likely locations.

Aquarius is aimed firmly at the home computer user, says UK managing director Mike Lunn. "It's not going to give IBM a headache, but it does aim to have wide appeal. I will be very disappointed if we haven't sold 100,000 units by the end of the year."

Electronics is now one of Mattel's most important activities claims Lunn, with the Intellivision video games machine the most important product.

But the US games market is shrinking rapidly, and companies like Mattel and Atari are making heavy losses. Mattel reshuffled its management in June, and announced that it would lay off 15% of its electronics division staff.

Its electronic division lost \$35 million in the first quarter.

MOSS... "It would have saved me money."

## Nixdorf set to invest in Trilogy

TRILOGY Corp, Dr Gene Amdahl's newest mainframe venture, looks set to acquire another European investor as talks with Nixdorf continue. Trilogy, based in Cupertino, California, was set up in 1981 by Dr Amdahl and his son Carl with the aim of developing a new IBM compatible mainframe computer.

The company initially raised a total of \$183 million. About \$1 million of the original venture funds came from the Industrial Development Authority in Ireland where Trilogy will have its European manufacturing, and \$13 million from Cii-Honeywell Bull in France.

Recently Sperry Corp, faced with cooling problems on its newest mainframe, turned to Trilogy with a \$42 million investment which gives Sperry access to the Trilogy technology, including a new water cooling system.

Following Sperry, Digital Equipment this week announced a major investment in Trilogy, just as the architect of the get-together, Gordon Bell, left DEC to join Encore, a new venture.

When Dr Amdahl founded Amdahl Corp, Helmut Nixdorf was an early investor with over \$6 million, which realised \$60 million. This time around he said he would not be going in, as Nixdorf was not in the mainframe business.

That was before Christmas and since then a stream of Nixdorf directors and managers have visited the Trilogy plant and, like everyone else, have been impressed.

## ICL turns down Fujitsu's super overtures

by Kevin Cahill  
ICL is resisting entry to the exclusive world of supercomputers as Fujitsu presses for a marketing deal on its new VP 2000 scientific processor.

ICL's negative stance is consistent with the position the company adopted when Fujitsu ran a supercomputer conference in London earlier this year, with the express intention of getting a deal with ICL.

ICL refused to sign then, and managing director Robb Wilmot is maintaining the same stance now,

despite a flurry of rumours in Tokyo and New York which say that he will sign up.

Wilmot will give no reason for his negative decision, but computer industry analysts have suggested that to add another capital goods division, with even longer lead times than for the Fujitsu supplied Atlas machines which ICL currently markets, would be financially unsound.

And the analysts see the rumours as a further attempt to pressure Wilmot to take the VP 200.

What the analysts have not seen, but which Wilmot has, is the internal Fujitsu specification for the VP 200, which shows that the machine is merely a souped up Atlas 10.

Against publicly quoted speeds from Fujitsu officials of 500 to 600 millions of floating point operations per second (Mflops) the internal documentation shows that the machine has a peak throughput of between 250 (VP 100) and 500 (VP200) Mflops.

There are two machines in the VP range, the VP 100 and the

VP 200. Both would be expected to perform at around 50 to 100 Mflops, far below the wildly optimistic peak rates being quoted in the Japanese technical press.

According to the Fujitsu specification Processor logic is 500 to 1,300 gate emitter coupled logic with a delay time of 350 picoseconds.

Main memory (RAM) is four 4Kbit modular bipolar, with 5.5 nano second access, complemented by 64 K MOS static chips with 55 nano access time.

# Report says IT upsets East-West stability

by Howard Karter  
INFORMATION technologies are driving the strategic balance of power between the free world and Communist countries to an unstable state, a new report asserts.

By making weapons more accurate and improving battle field communications, military planners have higher confidence in their weapons, according to report author Daniel Deudney, a senior researcher at the Washington-based Worldwatch Institute.

Deudney's report, *Whole Earth Security: A Geopolitics of Peace*, released in Washington last week, asserts that developments such as improved sensory technology, communications technology, and information processing technology per se, are destabilising.

As an example, Deudney asserts, the computers that form the guidance system for the cruise missile enables it to fly at low altitudes unerringly to its target.

Another example is satellite reconnaissance, which can provide information to target mobile forces or do damage assessment, turning satellites into tools of war.

According to Deudney: "Com-

munications technology has been exploited by the military and has created the idea that you can have a protracted or limited nuclear war because you can keep tabs on all your dispersed forces."

However, the information technologies that lead to greater instability could be used as the foundation of an alternative security system. For example, information technologies could be used for a more comprehensive arms control verification system. The key thing is for geopoliticians to make the political decisions necessary to use the technology in positive ways.

The Worldwatch Institute is a non-profit research organisation that does studies on a variety of global issues. The organisation is pragmatic, rather than liberal or conservative, Deudney says, and has friends as well as enemies on both sides of the political spectrum.

Half the institute's support comes from the sale of reports such as the present one, with the remainder derived from contributions from various foundations.

FISHER... Rehosting York Ada compiler on the Vax VMS operating system.

## Software Sciences SPL deal gives Ada the world

by Philip Hunter  
THE first full Ada compiler developed in the UK will be marketed worldwide next week following announcement of a joint deal between Thurn EMI subsidiary Software Sciences (SSL) and SPL International.

The compiler was developed at York University for the Digital Equipment Vax mini with the aid of a grant from the British Technology Group.

Marketing rights for the compiler were taken over by the BTG after a dispute with the university that arose when it was realised that the compiler had greater commercial potential than expected.

The BTG is granting exclusive licences for the compiler to SPL and SSL. "We will be rehosting the compiler on to another operating system," says Jim Fisher, SPL's managing director.

At present the compiler runs under Unix, but SPL will put it on the VMS operating system, which will give the product more clout in the US.

SPL will sell the compiler in the

US through its agents there, SSL will use the Boston process recently acquired from the Altergo empire as its American base for the product.

The US campaign will be strengthened if the compiler is successfully validated by the Department of Defence, which sets standards for the language through ANSI, the American National Standards Institute.

The first full ANSI standard was announced in February, since then the US military hardware specialist Rolm has come the first to have a commercially available compiler validated by the US DoD.

Like Rolm and another US company Western Digital, York University has been trying to progress the ANSI standard while developing its compiler.

Unlike Fortran and Cobol, it was given an ANSI standard before there were full working compilers for the language. The new compiler clears the way for the language to become established for a variety of real time applications.

## October is time for low-cost VisiOn

by Claire Gooding  
THE long-awaited VisiOn operating environment arrives in October, with an unexpectedly low price-tag of £1,200.

VisiOn is the first attempt to bring the concept of using "windows" on a screen to low-cost machines. The software will be available in the UK in the first week of October, and is initially targeted at the IBM personal com-

puter.

VisiCorp teamed up with Xerox, originators of the window idea, earlier this year, to develop a wider range of applications for VisiOn. The £1,200 VisiCorp is asking for VisiOn includes the basic VisiOn environment, the "mouse" controller for the cursor, and three applications packages; graphics, word processing, and a spreadsheet.

VisiCorp first made its name with the spreadsheet package VisiCalc, but now concentrates on promoting a whole family of business software products.

The VisiSeries family includes VisiCalc itself, VisiTrend/Plot VisiFile, VisiWord, and VisiSpell, with VisiSchedule on the horizon. VisiCorp is concentrating on separate implementation of its products for the three environments

PC-DOS, VisiOn and XT.

VisiCorp denies suggestions that there are any problems involved in upgrading the basic PC program to run on IBM's hard-disk XT. The company has just launched the VisiSeries software with last disc support, and according to Helen Johansson, who heads VisiCorp's Internal Sales in the UK, it was a simple process which encountered no snags.

## Peace protesters win publicity

by Caroline Burgess  
PEACE pages on Prestel mark the beginning of a computer network to promote the aims of peace and disarmament. Behind the scheme is the Peace Network, a group formed two years ago in America by the Union of Concerned Scientists.

The peace pages will be compiled by Sabine Kurjo, Peace Network's founder and co-ordinator, who explained, "They will consist of five categories: who is involved, activities, forthcoming events, contacts and news."

This facility became available on August 6, Hiroshima Day, and was published at an open-air festival organised by the Greater London Council.

Sabine Kurjo was approached by the Association of London Computer Clubs (ALCC), a group to promote the use of computers for recreation, which offered Peace Network the use of Prestel and Micronet free of charge.

Peace Network has 30 members, based in America, and has held electronic conferences via the American network EIES

Electronic Information Exchange System.

As yet computers have not been networked for peaceful purposes outside of the US. But Peace Network has contacted a large number of organisations worldwide. The eventual aim is to form a global network to supply information and co-ordinate campaigns.

Peace Network hopes to bring together people who work for peace and do not know about computers - and those who know about computers but not about the activities of peace campaigners.

## BT team wins £1,000 prize

by Donald Kennett  
THE effective way that a seven-man British Telecom design team solved the problem of joining optical fibres in the field has won it members the £1,000 national prize in BT's first Fit For Purpose competition.

The jig designed by engineer Ron Smith's team at a headquarters establishment in Wembley aligns monomode fibres to an accuracy of less than one micron, before welding the two ends with a high-voltage electric arc.

An effective and economical method of joining optical fibres is an important element in accelerating their installation. The prize-winning jig was a world first and it has already been put into service in several other countries as well as the UK.

Optical fibre cables are already more economical than copper ones for long-distance telecommunications and they are expected to replace copper on all routes in the late 1980s.

A further advantage is that their carrying capacities can be considerably expanded after they are installed, by future improvements in the design of the interface devices at each end.

The runner-up, who won £500 each, were the two-man team that marketed the Skytrack aerial reservation service on Prestel and the five-man team in Cardiff designed a micro-based device to prioritise the fault data produced in tabular form by the MAC management analysis centres which are attached to telephone exchanges.

## Amdahl nears El Dorado

by Kevin Cahill  
THERE is a growing consensus in the US, backed by huge sums of money, that Dr Gene Amdahl and his son Dr Carl Amdahl have discovered a semiconductor El Dorado.

Last week Digital Equipment Corp, the US's number one computer company in terms of engineering excellence put up \$26 million for a share stake in Trilogy, and an option to use the new water level, water cooled, super chips in future DEC products.

In addition, DEC has reached a tentative agreement with Trilogy to set up another semiconductor plant, in parallel with the existing plant, which is intended to supply material for the new Trilogy range.

The agreement with DEC is substantial, but the third such deal so far announced. The previous ones are with CII Honeywell Bull in France, and Sperry in the US. Each of the companies has a stake in Trilogy, and a right to licence the technology for use in their own products.

Both Trilogy and its investors have been careful to conceal the relationship between the sums subscribed by the outside investors

and the price paid for the Trilogy stock.

The reasons for this are fairly straightforward.

Trilogy is now in its second round financing, when the venture capitalists would normally be expected to draw a little blood by way of cheapening the shares.

This hasn't happened, at least in part because the industry itself recognises the potential of what the Drs Amdahl have done, has stepped in and provided most of \$100 million second round money, at better terms than the financiers would offer. This is because there is far more in the deal for DEC and Sperry than there would be for the financiers.

The intriguing question is whether Nixdorf, which has had long and close contact with Trilogy, will go ahead and invest.

If this happens that would appear to just about close the second round with Dr Amdahl still holding around 50% of the stock of a company which appears to be valued at around \$250 million.

On the assumption that Trilogy meets its first year sales targets of around \$500 million, and then goes on to hit the \$ billion in year

two, with profits around \$100 million, those now paying \$20 million for 9% of Trilogy could find their stake worth \$160 million or more based on conservative share price of 16 times annual earnings.

Trilogy is likely to need just one further round of about \$100 million to get the product into customer sites and finance the order book in year one. At that stage, provided that there are no serious hitches, the Drs Amdahl should be in a powerful bargaining position with the financiers.

The licence rights to the technology should provide a basic cushion of revenues, and the order book itself should have begun to fill out by the time the next round comes up.

Ken Olsen the founder of DEC and its current president described the Trilogy technology as "unique" and an "important breakthrough."

Those are plaudits very similar to those heaped on Trilogy by Sperry president Gerald Pabst and representatives' advised opinion from some of the sharpest engineers in both companies who had examined the early production chips from the Trilogy plant.

The chips themselves are about 3cm by 3cm and carry between one and two million components each.

The basic semiconductor technology is emitter coupled logic and the modules Trilogy itself is planning to use are water cooled.

When first shown to *Computer Weekly* in February this year, the chip represented the most advanced water-level fabrication ever achieved.

Texas Instruments some years ago tried and failed to achieve water level fabrication and attempts at full scale fabrication are in progress in several US and Japanese companies, so far without achieving the break through into production that has occurred at Trilogy.

So far Japanese reaction has been muted, but Sumitomo has concluded an agreement with Trilogy to sell the new mainframes in Japan. It is unlikely at this point that Trilogy will enter into formal agreement with a Japanese company at technology level, since all the Japanese computer builders except Oki and NEC are building IBM-compatible machines, which would compete with Trilogy's own product.

AMD AHL... Still holding 50% of Trilogy pot of gold.

### MICRO NEWS

SHERMAN... "Not particularly worried."

## NCR puts its faith in Dundee workers

by Caroline Burgess  
NCR is to build its 1632 computer at its Dundee plant from the last quarter of this year.

Jim Adamson, general manager of the Dundee plant, said he was delighted by this commitment of faith by the company to the Dundee workforce. He added that it will help to ensure employment and form a base within the BEEC for European sales.

NCR chairman William Anderson said: "The Tower 1632 can operate as a complete stand-alone data processing system for a small business, or as a special-application system in larger companies. Its power, flexibility and communication capabilities make it an ideal system for distributed application."

The Tower is a high end micro built around the Motorola 68000 processor.

It has Multibus input/output sub-system and an operating system derived from Unix. This makes a wide range of hardware and software available to end users.

Production will continue in Columbia, South Carolina, where the Tower was developed.

## Health care is Chained

by Caroline Burgess  
IMPROVEMENT in health care is promised with the introduction of a new message handling system from British Telecom Merlin.

Called Chain (Community Health Advanced Information Network) the system is based on a microprocessor-controlled terminal from Acorn.

It will be introduced in the south-east of England, but the aim is to provide a nationwide service. It is hoped that it will provide a comprehensive service covering all aspects of the health service.

Its uses will include the sending of patient referrals and the ordering of hospital supplies. It will offer access to a large database containing information on things like the use of drugs.

Chain has been designed and developed by Hallahan, Ingram and Associates of Henley-on-Thames.

Acorn announced that it will be moving into OEM for other large corporations. The Chain system is Acorn's first OEM project. Sales director, Peter O'Keefe explained the move by saying that its research, development and manufacturing experience will give "the perfect foundation" for companies to brand their own equipment.

Plans to increase production of its BBC microcomputer from 18,000 to 25,000 a month from September and the launching of a new home computer, the Electron, were also announced.

The Electron will be priced just under £200. Production is expected to reach 100,000 by the end of the year.

## Professionals get CP/M

DEC PROFESSIONAL micro users can run eight-bit CP/M software thanks to a plug-in chip from Bristol-based Zeta Systems.

Its Z-chip, a custom gate array plus a Z80 processor die, is packaged to plug into the floating point socket on the Professional board, and runs the Bridge software which allows program and data interchange between the host DEC system and CP/M.

The Z80 in the Z-chip is hidden from the micro's P11 processor - an 11/23 processor reduced to a single chip - but can read and write the host memory when activated by an otherwise unused floating point instruction. The Bridge software passes all I/O from the CP/M system to the host operating system.

Software included with the Bridge system - which in other forms enables Vax and PDP-11 users to run the extensive library of CP/M applications - allows DEC Professional users to run CP/M as another normal job as far as the host processor is concerned.

It has utilities to allow the machine to read and write floppies from DEC's other micro offering, the dual Z80/8088 processor Rainbow, and to transfer files between the host operating system and CP/M.

# Dealers have hard time despite micro boom

THE micro business may be booming, but the business of being a micro dealer is not holding up so well. Another microcomputer dealer - A-One Computers of Sutton - has gone into receivership, following last week's news of Datalect's troubles.

Chartered accountants Thornton Baker - which has been thriving on computer company receiverships lately - was called in by A-One's principal backer Investment in Industry last week.

A High Court ruling the previous week awarded Rank Xerox, one of A-One's main suppliers of micros, around £35,000. The directors of A-One took advice, and decided to shut up shop, dismissing staff.

Now Peter Beirne, the receiver from Thornton Baker, and Chris Ashurst, also from Thornton Baker and managing the business, are trying to find a buyer for the company. As well as Xerox kit, A-

One sold Apples and Sirisus, turning over £350,000 last year.

"We are really doing a salvage job," says Ashurst, "because all the staff were sacked, and there were several days when no-one was answering phones or anything, we have to work very fast. We are seeking to sell the business as a whole, and are expecting some offers this week."

According to a Xerox spokesman, the troubles between Xerox and A-One were basically over bad debts. The money awarded by the court represented the Xerox stock that A-One had sold. The total owed by A-One to Xerox was considerably more, but there was still equipment in stock and unsold.

Micro dealers have come and gone ever since people realised the profits that could be made out of shifting boxes to eager customers and then fading away before after-sales service and maintenance of the installed micros was needed.

But because the business has developed, and the dealers are getting bigger, firms hitting trouble are making bigger splashes.

"I am not particularly worried," says Ed Sherman, managing director of distributor and manufacturer ACT (Sirius), "because we vet all our dealers well."

In the whole of last year Sherman says only three or four of his dealers hit bad trouble, but the rate is speeding up. "Three or four have gone down in the past couple of months," he says, "and they are longer-established ones, with good business relationships and numbers of customers. That hurts."

He reckons that a lot of the problems come from dealers packing when new companies crop up offering big discounts to end users. He cites London-based EOS as an example of such a price setter, with the large discounts it offered on grey imports of IBM PCs. EOS itself hit financial trouble earlier this year, and went into receivership in April.

And Russ Nathan, of market research company Romtec agrees. "One of the fundamental problems is that people are trading too much on price. They leave themselves exposed on the service side."

Nathan has just published a directory of microcomputer dealers' which lists and analyses companies' trading in business microsystems.

"We found about one in five of the huge list we had did not answer the phone. They just weren't there any more. And we had hundreds of letters returned by the Post Office."

*1983 Directory and Analysis of Microcomputer Dealers*, Romtec, 75/77 Victoria Street, Windsor, Berkshire, SL4 1EH. Tel: Windsor 51550. In two volumes, £595 each volume.

## Especially for Unix based Systems

**BSL** In most progressive operations, the use of computerised systems is fast becoming a prerequisite to growth and profitability.

To bring the considerable advantages of computerisation to every type and size of organisation at a realistic cost, we at Bivins have developed software packages capable of meeting every conceivable requirement in accounting, stock control and order processing. And we've recently added to our widely used existing range with a series of entirely new packages which offer even greater efficiency and flexibility of use.

Product and customer support is the hallmark of our success and all Bivins packages carry a three-month warranty as well as round-the-clock back-up service. We also produce non-standard software, either to your exact specification or purpose-designed by us following consultation with you. We can offer you a computer system that will perform virtually any business requirement and at a cost that will bring all the advantages of the more advanced computer within your reach.

If you would like further information on any of our standard software packages or would like to discuss special requirements in more detail please contact us today.

# Sales teamwork pays dividends at Delta

FEW sales managers have as much say in running their companies as David Longley of Delta Systems. Since taking over in April 1982 he has completely reorganised the sales team, and played an active part in developing new products and forming a coherent development strategy.

His impact was immediate, with a loss of £80,000 on turnover of £2 million for the year ended March 1982 converted into a profit with an increased turnover of £2.6 million for last year.

The inevitable reward has now come Longley's way with elevation to the board of directors.

The turnaround resulted quite simply from more sales. Longley set about achieving this by

by Philip Hunter

streamlining the sales team, and forming three teams - one for the South, one for the North, one for government sales.

"It was not quite right when I joined," says Longley. "There were not enough salesmen and all reported in one line."

There are now three in each team, with an additional support team of nine.

The business is computer terminals with programming facilities, and communications devices.

One of the big sellers is the Delta 2830 Burroughs emulation terminal for mainframe users. Longley has been instrumental in adding features to make this terminal more attractive, such as an addressable printer port that keeps the terminal free during printing.

"The company has come a step nearer to the dream of having intelligent micros downloading data from mainframes by adding a disc unit which can be directly addressed by a large computer. It is also possible to have two independent communications dialogues going simultaneously, one with the Burroughs mainframe, and local processing on the disc unit."

"The problem many have is that the VDU screen is slave to the micro," says Longley. "This is all very boring. We believe the indus-

LONGLEY... "We believe industry will not buy that dumb approach."

try will not buy that dumb approach."

Another problem is that users often want to prepare messages and text and this ties up the mainframe, Longley argues. He has come up with an answer in the form of a text processing terminal with a 40,000 character memory to manipulate messages.

Before joining Delta Longley was UK sales manager for US mini-

support manager for Singer Business Machines until the company was bought by ICL in 1976.

"I became one of the assets bought by ICL and was moved to the government division."

Longley highlights an 18 month stint in Brussels while with Singer as the most memorable part of his early career. "A beautiful, tremendous place," he enthuses.

maker, Harris - something of an uphill struggle, since the company was lagging in the UK.

"Harris was caught out by DEC and Data General getting CAD/CAM houses," says Longley.

But Harris was more successful in the market for 3270 screens for IBM mainframes.

Longley presided over greater success in his previous job running a sales group at ICL. He was UK

support manager for Singer Business Machines until the company was bought by ICL in 1976.

## PLATFORM

This Platform is based on policy statement by the International Council for Computers in Education on network and multiple machine software.

## Tight budgets no excuse for software piracy

JUST as there has been shirking responsibility in the development of the International Council for Computers in Education policy on network and multiple machine software, so should there be shared responsibility for resolution of the problems inherent in providing and securing good educational software.

Educators have a valid need for quality software and reasonable prices. Hardware developers and/or vendors also must share in the effort to enable educators to make maximum cost-effective use of that equipment.

Software authors, developers and vendors are entitled to a fair return on their investment.

Educators need to face the legal and ethical issues involved in copyright laws and publisher license agreements and must accept the responsibility for enforcing adherence to these laws and agreements. Budget constraints do not excuse illegal use of software.

Educators should be prepared to provide software developers or their agents with a district-level approved written policy statement including as a minimum:

1. A clear requirement that copyright laws and publisher license agreements be observed;

2. A statement making teachers who use school equipment responsible for taking all reasonable precautions to prevent copying or the use of unauthorised copies on school equipment;

3. An explanation of the steps taken to prevent unauthorised copying or the use of unauthorised copies on school equipment;

4. A designation of who is authorised to sign software licence agreements for the school;

5. A designation at the school site level of who is responsible for enforcing the terms of the district policy and licensing agreements;

6. A statement indicating teacher responsibility for educating students about the legal, ethical and practical problems caused

by illegal use of software.

Hardware vendors should encourage educators in making maximum cost effective use of the hardware and help in enforcing copyright laws and license agreements. They should:

1. Make efforts to see that illegal copies of programs are being distributed by their employees and agents;

2. Work cooperatively with interested software developers to provide an encryption process which avoids inflexibility; discourages theft;

Software developers and agents can share responsibility; helping educators obtain copyright laws and publisher license agreements by developing sales and pricing policies. Some developers and vendors should:

1. Provide for all software back-up copy to be used for archival purposes, to be included in every purchase;

2. Provide for on-approval purchases to allow schools to permit the software to ensure that it meets the needs and expectations of the educational institution. Additionally, software developers are encouraged to provide regional area centres with software demonstration purposes. The ICCE encourages educators to develop regional centres for this;

3. Work in cooperation with hardware vendors to provide an encryption process which avoids inflexibility but discourages theft;

4. Provide for, and note in advertisements, multiple-copy pricing for school sites with several machines and recognize the multiple copies do not necessitate call for multiple documentation;

5. Provide for, and note in advertisements, network-compatible versions of software with pricing structures that recognize the costs of development to some compatibility and recognize the buyer's need for only a single copy of the software.

See news story, page 2.

## Watch out, here comes AT&T

THE channel through which AT&T will be able to reach overseas markets for the first time on any sizeable scale is opening up at the very time when the parent company in the US is being pruned severely by the divestiture of all its local operating companies.

If the pruning analogy holds good, this double event may encourage a vigorous growth. It will be fuelled by the energies of a management team which, used to controlling a large and complex operation, suddenly finds itself at the heart of a powerful but compact and simple one.

The route AT&T has chosen to take into the international market through the worldwide marketing network operated by Philips, could be the means of achieving rapid and dramatic results.

AT&T is currently the world's biggest company. Its shares are legendary for being the repository of little old ladies' savings. And Philips is no minnow. But the history of attempts at co-operation between two such giants contains many monumental failures.

Already the process of coming together has been marked by long delays. The joint venture was expected to be formalised early this year. In April a spokesman for AT&T International said it should be tied up early in May, but the deal was not signed until July.

When the venture does start work, its first task will be to combine the PRX-D digital exchange that Philips has been developing with the 5-ESS exchange that AT&T launched late last year.

If Philips and AT&T separately were not worrying competitors for the UK's System X digital networking system, they certainly are now. And whatever happens, the progress of this marriage of giants will make a compelling spectacle.

## Alternative chips

WHEN Dr Gene Amdahl and his son set up Trilogi they promised that Trilogi would "re-invent" computer-aided design, "recast" the semiconductor basis on which computers are built and would present the world with a new mainframe architecture.

To balance those apparently extravagant promises the two men also warned those who were financially supporting the project that what they were proposing "had not been attempted before, might not work, and even if it did work, might not sell".

So far Trilogi has made good on two elements of its proposal - the computer-aided design element and the semiconductor element.

And that is not simply our view. Digital Equipment Corp, whatever market doldrums it may be suffering at the moment, remains the number one computer company in terms of its engineering and innovation.

And Digital has taken the view that Trilogi has made good on two of its promises, and put \$24 million where its mouth is - a goodly commitment even for a company of DEC's size.

Sperry Corp has been even more lavish and put \$42 million behind the opinions of its best engineers and technologists, who are obviously convinced that Trilogi has made it in the semiconductor field.

Honeywell was in from the beginning. General Electric is talking to Trilogi, as is Nixdorf, and a raft of other blue chip names in the industry.

The clear implication is that the best companies in the industry, having put their engineers in, are convinced that Trilogi is to be the fountainhead for semiconductor technology for the next generation of computers.

Only potential competitors, principally IBM and the IBM compatibles, are excluded by the terms of Trilogi's set up from doing deals with the company.

Which, by a simple extension, makes it look that there may only be two technologies in the computerised future - that which is made by Trilogi, and that which is not.

In an industry dominated by IBM, it is sure to be in the interest of computer users to see Trilogi succeed with its ambitious plans to offer an alternative.

## 1984 and all that...

THIS week's example of the strange things people say about computers was sent in by Graham Stedman of London, who wins £5.

If the world's most powerful computer can control even Superman... no one on earth is safe.

Advertisement for the film Superman III.

## LETTERS

## Not everybody price cheats

I WAS interested to read Paul Walton's article (*Computer Weekly*, July 28) concerning the price of imported software.

I was surprised to hear that it is considered common practice to exchange the dollar sign for a pound sign. I suspect that Mr Walton is rather out of touch.

Like Lifeboat, Xitan has long followed the policy of pricing most software from the US at a conversion based on the current dollar rate.

Sure, it costs money to import the software, and this comes out of our margins. But we still manage to offer our dealers good discounts, and run a thriving business. I would consider that any software distributor worth its salt (of which there are perhaps precious few) can negotiate ade-

quate deals with the software houses, and run its business tightly enough, to allow users in the UK to buy at equivalent prices to users in the US. Isn't this the distributor's job?

In general, the only cases where the conversion rule does not apply is where UK pricing is fixed by the software houses themselves. MicroPro has a recommended sterling pricing which is based on a dollar rate higher than the current one - so UK users can actually buy their software cheaper than US users.

Digital Research used to have a recommended dollar price in Europe that was higher than in the US, but dropped this from July 1, so pricing is now the same on both sides of the Atlantic. Microsoft enforces UK prices that are

slightly higher than the US ones.

So what's the problem? If users find their software prices high, perhaps they are not buying from one of Xitan's registered dealers? JOHN DARDS

Marketing Manager  
Xitan  
Southampton.

## Impossible

THE problem set by Puzzler (*Computer Weekly*, August 4) is impossible.

S. GILINSKY  
EOB Limited  
Sunderland.

Thanks to the many letter writers, telex senders and callers who pointed out that our artist mistakenly added an extra line to our puzzle and answer. Sorry but see below.

## The Mail misquoted

I THOUGHT I would just let you know that you paid out £5 to Mr Dale (*Computer Weekly*, July 28 1984 and all that) under totally false pretences.

I was, in fact, totally misquoted in the *Daily Mail* and the comment should have read: "As the titles on the manufacturer's computerised lists are still in circulation, it would be impossible to delete them until each and every one is returned".

If we did delete the titles before that time, it would, obviously, mean we would no longer be aware of their whereabouts or quantities.

I suggest that maybe it is the *Daily Mail* who say strange things about computers.

PAUL H. FELDMAN  
London.

## The puzzle of the extra line

WHATEVER has happened to Puzzler (*Computer Weekly*, August 4)? The puzzle is impossible, and a corrected version would be trivial.

Route problems of this sort are well-known. All it boils down to is counting the number of lines which meet at each intersection. Several cases are apparent:

- 1) All intersections have an even number of lines - there is more than one route.
- 2) Exactly two intersections have an odd number of lines - these are the end points of a route.
- 3) More than two intersections have an odd number of lines - there is no solution.

Unfortunately, your puzzle falls into category three:

Your solution works if the \* line is removed (see diagram right), but such a simple "puzzle" is not up to the usual Puzzler standard.

PHIL LLOYD  
South Nutfield, Surrey.

## The Key Specialist Event in the Computer Year

Sponsored jointly by the Peripherals Suppliers Association and 'Systems International', Peripherals '84 has justifiably been named the *only* specialist show for computer professionals.

Through a massive publicity campaign using all the key systems development publications, Peripherals '84 will attract a record number of visitors from purchasing/specifier sectors of this continually expanding market.

Attendance in 1983 was up 25 per cent on 1982. And 1984 is all set to be the biggest and most successful to date.

This is the buyer/specifier confrontation of the year. Don't miss it.

## How to Book Your Stand

This is the key specialist event in the Computer Year - ACT NOW - for further information telephone Ian Hardman, Sales Manager on 01-661-3022.

PSA members are eligible for a preferential stand rate. If you are not already a member and would like to know more about the association's aims and objectives phone Mr Michael Perry on 0908 668118. Provided you become a member before the opening of Peripherals '84 you can claim the special members rate.

For more information return this coupon to Ian Hardman, Peripherals '84, Room L216, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

## DOWNTIME

"But I thought you were going to show me your local network!"

## 10 YEARS AGO

FROM COMPUTER WEEKLY OF AUGUST 9, 1973: The Management Survey Centre predicted that the lead in computer staff pay would come to an end. Programmers pay ranged from £1,602 to £2,358 a year. A £1 million Post Office order went to Plessey for the UK's first computer-controlled international public telex exchange. IBM announced a new model of its System 7 industrial and process control computer.

## World-shattering epic hits screen

WHILE you all were still locked into your programming nightmares or whatever you do Sunday mornings, I was developing daymares at a sneak preview of War Games, the movie that does for the Pentagon what jaws did for marine biology.

I can fairly exclusively reveal that it's the most fun of its kind, certainly since Dr. Strangelove. If that's what you like.

The concept is that this sugary teenage computer buff and his treacherous girlfriend log in accidentally to THE system. And of course take the thermonuclear option as the most kicks (sic).

Characterisation is Hollywood-monotyped, but the plot

convinced me completely. When the kid chokes out, in McBarre-style despair, "This is not real!" I could only beg to differ.

Those defence supply programmers who spend so much time and effort playing at cracking NATO systems passwords can testify to its plausibility.

The box itself, WOPR (what's that? Wipe Out People Routine?) is a superb contraption with coloured flashing lights, quite unlike your actual Cray fridge.

Fifth generation warriors will pick up that it is a Brit who's the brains behind the whole show - though unfortunately he seems hesitant about whether life on earth is worth bothering over.

There are a couple of excellent one-liners, the one about urinating on the relevant chips got loud and raucous applause from the aisle-rollers.

Anyone with any interest in computing and/or survival will love this epic.

The non-technical may at least glean that floppy discs have nothing to do with rabbits' back troubles. The philosophical question of whether the bigger threat to our continuation comes from the machines or the US presidency remains unsolved, but anyway...

Thanks for the Memorex free ticket.

Husky... data intact after crushing ordeal.

## Down - not out

A UK micro maker was persuaded to hear that one of its models had arrived in the States looking awfully bad. The unwelcome condition had been the unwilling victim of an elephant's archery. The labelled "damaged in transit" micro, the outdoor Husky portable made by DVW Microelectronics, is after all supposed to be almost indestructible.

What had the airline done to inflict such damage on the little box? All knowledge of how the damage occurred was denied.

So the company has been left to draw its own conclusion - and has decided that the damage must have been caused by a four-ton fork lift truck, or body of similar size.

"Deep gouges on the underside of the aluminium casing suggest that it was dragged along beneath the truck, before being rolled over," says production manager Derek Ramsdale. This must have happened while the machine was being unloaded from the hold.

Anyway, the company is proud of the fact that its machine was still in working order after its ordeal.

"If it had contained data that was critical it could be recovered," says a spokesman.

# Academics are taught a lesson

SOFTWARE houses are waking up to the possibilities offered by the huge wealth of raw material from universities waiting to be exploited. And in some cases the raw material needs little refining. Systems Designers, for example, has little more to do than fix a price tag to the Poplog package it is marketing, which was developed at Sussex University.

And the Ada compiler written at York University needs only to be dressed for the market by SPL International.

But such successes are probably the exception. Poplog has already been sold by Sussex University for £3,000 to commercial users, and £300 to academics.

SDL will more than double the price to between £6,000 and £7,000 to cover the cost of continuing support. Universities will still get the lower rate, but no support.

The main reason for the decision by the university to give up commercial marketing rights is that project leader Aaron Sloman disliked wasting his time as a salesman.

"I wanted to get rid of it as fast as possible," Sloman says of Poplog. Sussex will get half of the new price as royalties.

The package is a combination of three artificial intelligence languages: Lisp, Prolog and Pop-11, which looks like Pascal without the type checking statements.

All three languages compile into a single language. This means that programs can be written in a mix of the three languages, giving users the best of all worlds. And only one compiler has to be rewritten to put the package on to a new machine. SDL's version runs on the Digital Equipment Vax, but Sloman is still developing a version for the ICL Perq supermicro, and the Bessdale M68000-based micro with Unix.

Sloman says there had been a spate of commercial orders for Poplog before SDL took over marketing. There are now 12 commercial users, including two in the US interested in the Prolog capabilities. Prolog features prominently in the Japanese fifth generation plan to develop artificial intelligence applications, and has attracted attention in the US.

Sloman says he is thinking of getting Poplog implemented on IBM computers to bring in more US contracts. But he wants to keep this development at arm's length, being a little tired also of redeploying the package for new hardware. And there is a plan to put Prolog on the Prime mainframe.

There are also about 30 academic users of the package, taking advantage of the low price for them of £300. Sloman thinks they have also been lured into buying by the decision of the Science and Engineering Research Council to feature it in the IKBS programme to develop artificial intelligence applications.

SLOMAN... "Wanted to get rid of it."

## Report writer package eases the Cobol load

THE coding load could be lightened for Cobol programmers with a new package for report writing from a small London company.

The package, just announced by S&PC Systems, is an extension of the existing Report Writer defined in the 1968 Cobol standard by ANSI, the American Standards Institute.

According to John Piggott, managing director of S&PC, many tedious lines of coding can be avoided with the new report writer.

ANSI Report Writer, Piggott declares, is sadly lacking in some of the facilities that programmers really need, such as the ability automatically to repeat fields of data when printing.

S&PC has added this facility in its new Full Report Writer with an OCCURS clause which enables fields to repeat. This clause is already present in the Data Division of the language for input of information, but until now there has been no facility for output.

Full Report Writer is particularly useful where there is a lot of repetitive information to be printed, and Piggott gives as an example a program to print a calendar. This can be done in 50 lines of Cobol, using the new OCCURS clause, compared with several hundred lines without it.

Full Report Writer has 12 clauses not to be found in ANSI Report Writer. About half of these are clauses like OCCURS already existing in other parts of the language for input or manipulation of data. The other half are new ones devised by S&PC or recommended to Codasyl.

An example of this second group is the PRESENT clause. This allows greater flexibility by enabling unwanted data to be omitted from specific reports. It could be used to stop a bank account number from appearing on the payroll of an employee who is paid cash.

KNWLDPRTRFRMLGWD

Legend has it that this caustic comment was once carved on a professor's door, at one of our great universities, by a disgruntled student about to be "sent down."

Clearly something is missing. Can you work out what, before turning to page 47 for the complete answer?

Two Royal Academy of Dancing students admiring the talents of their new machine.

## Dancers give computers a whirl

COMPUTERS and art are becoming inseparable. After the Royal Academy of Dancing's Robert Cohen's drawings generated by an expert system, the Royal Academy of Dancing has lifted its curtain on the act - to compute the choreography of the music, but for the sake of keeping members' records.

With 12,000 to 13,000 members, this work had got out of hand. An NCR I-9020 system has been brought in to keep records, which include details of ballet examinations taken and passed.

Readers of *Computer Weekly* will have seen recently how musicians are making more use of computers with advances in digital recording. The present development is to use computers to generate music in real time rather than have them just perform sequences of sounds laid down in advance. This poses the problem of how the musician is to control the sound and maintain spontaneity.

## PEOPLE

Appointed managing director of Prime Computer (UK) is Malcolm Padina. (above). He will be responsible for sales and service of Prime computers throughout mainland UK. Neil McMullan, former managing director is to head Prime's new New South Pacific region. Padina has been managing director of Prime Computer in Germany.

Southern area sales engineer for Instem Computer Systems is to be John Carruthers. He will be responsible for selling the Instem range for data acquisition and control to Southern England. Carruthers has several years' experience in instruments and control, including a period at Rochester Instrument Systems.

Christian Schmid has been appointed European distribution manager for Seagate Technology. Supplier of 5 1/4 inch Winchester disc drives. Eric Patis is named as applications engineer for Seagate's European operation. Schmid is to be responsible for European sales, distribution and support for all Seagate products, and will be at the company's Munich office. He replaces Joop van de Hel who recently left Seagate.

Sintrom Electronics has appointed Martin Rimmer as product manager for the company's new Business Systems Group. He will be responsible for marketing the recently launched Sintrom laser printer throughout Europe, primarily on to ICL Perq systems. Rimmer was a sales executive with Anderson-Jacobson before moving to Sintrom, and before that worked for five years for Opperman Gears, part of the Hawker Siddeley Group, initially as a sales engineer in home and export markets and later in sales management.

Appointed director, customer engineering, for the Memorex International Group is David Jenkins. He is responsible for supporting customer engineering managers throughout the group. Jenkins comes from the Communications Group in Santa Clara, California, where he was vice-president of manufacture.

Neil Aldred has been appointed director of strategic marketing for Northern Europe with Masstor Systems. He will be responsible for joint marketing agreements between Masstor and other mainframe suppliers, and marketing within the banking and financial sector. Aldred has spent 17 years with Honeywell Information Systems, most recently as manager of South-east branch responsible for the sale and systems support of all products.

General Automation announces the promotion of Bill Rice, managing director of General Automation Ltd, to vice-president of sales, World Trade Division. He will be based at Anaheim, California.

Two chartered accountants have joined the board of Premier Computers. David Donovan becomes sales director and David Macmillan financial director. Donovan (left) is a former area sales manager and sales manager at Premier. Macmillan (right) joined Premier's West German operation in 1981, becoming director of European finance in 1982.

MAP Computer Systems, the Oldham packaged software company, has strengthened its software service with the appointment of George Bell as software manager. He has overall responsibility within MAP for developing packaged business software for microcomputers. He has six years' experience in programming and has been with MAP since 1981.

Nick Gill has been appointed managing director of the Hunterskil regional business, Hunterskil South in Maidenhead. He has been involved in sales and management training since leaving his position as managing director of KPG Computing Services in 1980.

Paradyne, manufacturer of high-speed modems and IBM network communications systems, has appointed David Hobin as managing director. He has spent the past seven years with Paradyne, as director, Paradyne (UK), and director of the Western region, comprising 13 States of the US.

Package Programs has appointed Ann Goss (above) as a client support consultant for its Human Resource Systems Division. She will support users of the PPL-Cyborg Payroll and Personnel System. Goss previously spent six years with Baric Computing Services in the Customer Services Department.

Prime Computer (UK) has made Peter Stallard national field service manager, based at the company's headquarters in Hounslow, Middlesex. For the past 12 months he has been field engineering manager for Prime's Midland district.

Based in Paris, Alain Kortchinsky is appointed regional manager for Shugart's operations in France, Italy, Belgium, Holland, Spain, Portugal, Israel and South Africa. In England, Barry Barker has been promoted to regional manager, still responsible for the UK and Ireland, but adding Sweden, Norway, Denmark and Finland to his list.

Werner Radford is to be technical support and training engineer at Perex. He joins from Rascal Training Services where he was an instructor and commercial officer.

Law Data Systems, a Leeds-based software house specialising in the development of debt collection systems and services for the legal profession, has appointed Mark Fletcher, 30, as marketing and sales director. He has been involved in the marketing of computer systems since 1976.

Phil Blatchford (below) has been promoted to general manager of IBR Microcomputers, distributors of the Fortune 32:16 multi-user desk-top micro. Based at Reading, he will be responsible for all aspects of the marketing and distribution of the Fortune 32:16 system.

Elizabeth Edmunds (above) joins Cifer in the newly created post of dealer support analyst. She will be responsible for supporting Cifer dealers on application packages. She previously worked with Geest Computer Services in customer support.

After nearly 46 years with the Sperry organisation John Jakens is taking early retirement. It was in 1937 that Jakens started work with the Remington Typewriter Company as an apprentice mechanic. Jakens was involved in the first moves to set up Univac, and in 1971, he gave up customer engineering to become company administration manager. He continued to run Remington House and all its services until Sperry moved out in 1981 and since then has carried out similar functions at the company's new central London location at Centre Point.

**DIARY**

**AUGUST 16**  
Data Communications Overview at the Control Data Institute, London, gives an introduction to modern communications systems. Organised by Control Data, it costs £145. Details from Sylvia Lyons, 01-240 3400.

**AUGUST 30-SEPTEMBER 2**  
The second International Conference on Database, organised by the British Computer Society and universities of Aberdeen and Cambridge, takes place at Churchill College, Cambridge. Details: Peter Hammarley, Middlesex Polytechnic, London N11 2NQ.

**AUGUST 31-SEPTEMBER 1**  
Improving Programmer Productivity is a practical workshop for trainee-programmers with basic language training and initial experience. Run by BIS Applied Systems, it is to be held at the Park Court Hotel, London, and costs £270. Details: Cherry Blignore, 01-261 9237.

**SEPTEMBER 6, 7**  
BIS Applied Systems is running the course, Team Management Leadership, for newly appointed project or team leaders. It will be held at the BIS Training Centre, London SE1. Cost is £285. Details: Cherry Blignore, 01-267 9237.

**SEPTEMBER 5-8**  
IBM Cobol Review, a course organised by Altego Education, takes place in London. Aimed at inexperienced Cobol programmers, it costs £450. Details: Altego Education, 01-836 9303.

**SEPTEMBER 7-9**  
Implementing and Operating Local Area Networks is a seminar organised by Frost and Sullivan. Taking place at the Mount Royal Hotel, London, it costs £425. Details: Carolyn Budd, 01-486 0334.

John Lee has rejoined Rediffusion Computers as a systems consultant for the videotex branch and will be based in Birmingham. Previously he was employed by Datapoint/Infotrex as a sales support analyst from 1979 to 1983, and prior to that he was with Rediffusion (then known as Redifon) Computers.

Unix software venture Sphinx, has appointed John Winter as software sales manager. He has worked in the computer industry since 1966, for Hoskyns, Honeywell Information Systems (Time Sharing Division), Software Sciences and IAL Gemini.

Steve Jones, 33, until recently marketing accountant with Max Factor, has joined Dataflex, of Hammersmith, as technical services manager to support sales of the Ferox Modeler financial modelling software package for microcomputers. Dataflex was formed earlier this year as a microcomputer systems and software distributor.

Prime Computer (UK) has made Peter Stallard national field service manager, based at the company's headquarters in Hounslow, Middlesex. For the past 12 months he has been field engineering manager for Prime's Midland district.

Based in Paris, Alain Kortchinsky is appointed regional manager for Shugart's operations in France, Italy, Belgium, Holland, Spain, Portugal, Israel and South Africa. In England, Barry Barker has been promoted to regional manager, still responsible for the UK and Ireland, but adding Sweden, Norway, Denmark and Finland to his list.

# A lesson in architecture from ICL.

It is a fundamental principle of architecture that loads are best supported by distributing them evenly.

This is the very same principle upon which the radically new architecture of DRS-ICL's Distributed Resource System - is founded.

Conventional computer systems demand that a single central processor handles all the mundane tasks of organising input and output, filing, and communication. The result is that it is often too overburdened to handle the application.

By contrast, the DRS system uses a number of function processors and distributes the tasks between them. Each processor is dedicated to one task: handling input and output, communication, and, of course, the main application itself.

This open system forms the basis for real distributed processing through local networks, with systems within the network sharing their resources.

And, in turn, these local networks can communicate further via wide area networks, and with mainframe computers - both ICL and IBM.

Most importantly, the system can grow. As your demands increase, more function processors can be added, and more workstations.

Your investment in DRS is further protected by the ease with which the distributed resource system can be extended to keep abreast of the future developments.

Which brings us to another essential architectural principle. The very best architecture does not simply provide for the present.

It plans for the future.

**DRS MODEL 10**

An intelligent workstation which can be integrated into a DRS network, providing and maintaining data.

**DRS MODEL 20**

A desktop workstation with three 1 Mbyte integral discs that can run discs or be linked via MICROLAN. It can also communicate via Wide Area Networks with ICL and IBM systems.

**DRS MODEL 25**

Shows the same features as a Model 20, with integral fixed and floppy discs of 10 and 1 Mbytes. It can also form its own local network, supporting two Model 20s or Model 10s.

**DRS MODEL 50**

A desk-style unit with the system cabinet housing a 1 Mbyte disc and a single fixed disc of 16 or 27 Mbytes. It can support any mix of Model 10, 20, 25, 40 and 50 systems.

**DRS 8000 SERIES**

It can function as a stand-alone system, or it can function as one of a number of networked workstations, supported by the DAS Document Storage System.

For more information, dial 100 and ask for Freddie ICL. Or send coupon to ICL, Inform, ICL House, Pinner, London HP85 5TW.

We should be talking to each other.

# Pitdown or panacea of payment systems?

Gil Jones looks at the scope of a new development in UK retail outlets

TRANSACTION telephones are now being introduced for the first time into retail outlets, banks and other transaction points in the UK where credit cards are in common use.

What are transaction telephones? Essentially they are sophisticated terminals capable of functioning either as a modern telephone for voice traffic or as a memory-based dialling facility for establishing a link through the PSS network to remote computers.

For the moment their primary purpose – indeed their only purpose – involves credit transactions for credit cards. Only Bar-

claycard and Amex are open for business. Shortly Access and Diners will join them.

Transaction telephones are also being used in one in-house credit card system (Debenhams).

The transaction telephone allows the retailer, bank or other user, to obtain rapid and automatic credit authorisation for the card tendered to him, thus removing the need for the rather distasteful and time-consuming telephone call that is currently necessary for transactions above the floor limit.

There is no doubt that transaction telephones at least in the immediate term, represent an impor-

Transaction telephone in use for Debenhams' in-house credit card system.

tant new development in payment systems. The longer term question is whether the introduction of transaction telephones represents a major step forward in payment automation towards, ultimately, electronic funds transfer systems (EFTS), or whether it will prove to be the Pitdown Man of payment systems – an apparent evolutionary development that will turn out to be a blind alley, superseded by another, quite different development path.

We at RMDP, Retail Management Development Programmes, believe the former, for several reasons. First, we have believed

for a number of years, and have said so often, that the attractive way toward more sophisticated and cashless payment systems is via sensible inexpensive steps that can be demonstrated to have real benefits for those footing the bill for the systems, rather than via a one-off jump into full ranking EFTS.

Secondly transaction telephones, because they offer useful benefits at a relatively small cost, will be adopted widely in the UK and elsewhere over the next two to three years and beyond. The terminal when transmitting data communicates over the normal PSTN until it makes contact with the nearest local PAD (Packet Assembler/Disassembler). From this point the terminal appropriately addresses the data for high speed digital transmission across the PSS network to the host computer.

This may not be true in all areas. In fuel retailing for example, where credit card transactions are common, the trend is toward full EFTS systems.

There is a massive potential market for transaction telephones. Their potential encompasses all retail cash register points where credit card transactions represent a relatively high percentage of transactions (this will include many departments within the department stores, fashion and shoe multiples, many counters in variety stores, cash and carry, some do-it-yourself outlets and many other multiple and independent outlets, large and small).

In addition to the retail market there are many other places where retail transactions take place (quasi-retail outlets as we define them) such as hotels, travel bureaux, airports, railway stations, restaurants, etc. And in the banks transaction telephones are already in use in the cash against credit card facility.

RMDP has recently carried out market research on transaction telephones to provide potential market estimates for each of these sectors, and we estimate the total potential market in the UK as 255,000 units.

Currently four companies offer transaction telephones: STC, Ericsson, GTE and Racal. In an area not exactly famous for co-operation and liaison regarding standardisation of equipment and services, these four transaction telephones represent a refreshing example of different interest groups holding hands before they jump.

The design of the four terminals – apart from a few minor differences – is essentially identical. This is because they have all been brought to a specification developed by the Credit Card Companies Technical Committee (CCTC) chaired by BT and dominated by the credit card companies, which appear to have been fairly precise in their requirements of the transaction telephone.

The fact is that they have to be. Imagine trying to sell the idea to a retailer that he must have four

transaction telephones on his counter to handle the different cards that he might be tendered!

But this does not mean that transaction telephones are easy to use with an identical, simple sequence for any card tendered. In fact the telephones can handle up to 15 different cards.

Transaction telephones are easily installed. All they require is a standard modern British Telecom jack-plug socket and a 13 amp mains electricity supply. The terminal when transmitting data communicates over the normal PSTN until it makes contact with the nearest local PAD (Packet Assembler/Disassembler). From this point the terminal appropriately addresses the data for high speed digital transmission across the PSS network to the host computer.

The telephones also have the facility to switch automatically between PSS and PSTN connection if connection is not made successfully through the first route.

At present there is no doubt that the main initial beneficiaries in the use of transaction telephones will be the credit card companies themselves via the reduction in fraudulent use of credit cards. For this reason it is expected that the cost of these telephones to the retail or other user (about £10 a month rental) will fall or even disappear within a short time. Transaction telephones cost between about £250 and £450 depending on type, precise specification and numbers bought.

At the fourth European Congress on Automation in Retailing (EPS '83), to be held at the Royal Lancaster Hotel, London, September 20-23, organised by RMDP, there will be a session on The Retail Banking Interface. Details of EPS '83 are available from RMDP, 5/6 East Street, Brighton BN1 1HP. Tel: (0273) 722687.

There are, however, some initial advantages to the trader. Among these are that all credit cards may be checked irrespective of floor limits. Floor limits can be altered randomly and frequently by the card issuer without even the knowledge of the shop staff involved; all credit cards can be processed in an identical manner; and credit authorisation will in general be quicker than via a normal telephone call.

But the real benefits for the trader lie in the future. And the prime development that will be looked for is the use of these telephones to enable credit card transactions to be paperless. This could be done now, since when the telephone makes contact with the credit card company's central computer for credit authorisation purposes, all the information for a

paperless transaction is known (credit card types and number, amount of transaction, identification details of the transaction location – ie retail branch or hotel whatever).

The problem is more political than technical since it requires the credit card companies to alter their systems. Before they can do this they have to overcome worries about audit trails in the event of erroneous transactions and the demand by customers for some form of documentary evidence of transaction.

From the traders' standpoint paperless transactions would be a terrific boon. The current system of filling up the live-out films takes a long time (to the constant irritation of those further back in the queue) and is extremely error prone. Inexperienced staff often fill out films incorrectly or record a Backlog transaction on Access documentation or whatever.

Paperless transactions via transaction telephones would eliminate both these problems and more.

There are other possible future developments. At the moment if a credit authorisation is refused the terminal is referred to voice contact – that is to say the operator of the terminal is requested to telephone the credit authorisation centre. Already facilities exist for the number of that centre to be automatically downloaded into the terminal so that the terminal can then dial the number, so making the

necessary contact. A further refinement is that the credit card authorisation computer will automatically pass on details of the transaction, and the reasons for the refusal, to the credit authorisation centre (which may be in a different location) so that the recipient of the call will already have the relevant information on the VDU.

Another future development of particular interest to retailers is the possible integration of transaction telephones with EPOS terminals. This is already being experimented on by NCR and we are looking for more progress in this area, involving other equipment suppliers, shortly.

Dr Gil Jones is a director of Retail Management Development Programme.

# Why Xinet could be a giant among the local networks

David Casey reviews a significant arrival from Xionics which challenges Ethernet's local area network domination

AFTER three quarters of a century, Frank Hornby's Meccano sets still find a place in the Christmas stocking. The colours of the components have changed over the years and there are instructions in the handbook for building a North Sea Oil Rig, but the underlying principles of construction have remained the same.

Half-inch girders are standard, with a half inch pitch for screw holes, and 4 BA screw threads. From the outset, there has been a Meccano "protocol" which has to be observed if alternative components are to be integrated with the kit.

For all its sophistication, the Ethernet system for local area networking is a modern day Meccano set. The technology is being adopted by office system suppliers as the basis for their own networks, and this proprietary protocol is at the heart of IEEE standards for one of the types of network architecture.

Despite the trend towards Ethernet and its lower speed look-alikes such as Zilog's Z-Net, there are office automation manufacturers who have opted for networks wholly incompatible with this emerging standard. The majority have evolved to meet a specific requirement in the marketplace – whether to provide a low cost ex-

pansion path for computer resources, or an ultra secure office environment.

One of the more recent entrants to the office systems scene is G.B. Techniques of Prestwick. Virtually unknown in the commercial sector, the company has been supplying photocomposition systems for newspaper production for more than 20 years.

This sector of the printing industry requires a level of security not normally demanded for office administration. The failure of a disc drive holding the copy for the following day's editions, for example, would be disastrous: writing text to two independent drives simultaneously is therefore a standard practice.

Minicomputers dominate the newspaper production scene: DEC hardware alone accounts for more than 70% of all the installations worldwide. G.B. Techniques has opted instead for distributed micros linked over the company's Speednet network. Running business applications packages rather than composition software, Speednet has now been launched as a viable office automation product.

All components in the G.B. Techniques system are based on a Monoboard computer, built around a Z80 and providing an interface with the network. File

storage at a local level can be floppy discs or five megabyte Winchester, but the principal file server in a Speednet network is a Central File Store (CFS) carrying tandem Winchester drives.

Communication between the workstations and the CFS Winchester is at the relatively low speed of 17,000 characters a second; the equivalent of perhaps four A4 pages of text.

Output devices on Speednet – the print servers – are linked to

checking protocol. Five retries will be attempted before an error condition is generated by the system. Data is checked on a second level. Each byte is examined as it is being transferred; a process which guarantees integrity at the expense of transmission speed.

The security inherent in a Speednet is high compared with most competitive systems, but the standards set are a pale reflection of those achieved by Xionics.

Xinet is a local area network

The security inherent in a Speednet is high compared with most competitive systems, but the standards set are a pale reflection of those achieved by Xionics

another Monoboard Computer acting as a satellite processor. Since G.B. Techniques has been interfacing its composition version of Speednet to almost every typesetter device on the market, hooking letter quality printers and matrix devices into Speednet has been a relatively minor task.

The CFS processors poll each Speednet peripheral in turn over low quality audio cable. A request from a terminal to update a file would result in a two Kbyte block being transferred under full error

based on a closed ring, with a maximum data carrying capacity of 10 million bits per second. The protocol for messages entering the ring is empty slot – a technique in which data can only be loaded from a node when reached by an empty carrier bit circulating round the network.

This contrasts with Ethernet, in which two node processors can attempt to transmit simultaneously. If a collision is detected, both nodes pause for a statistically determined period before re-trying.

But the transmission protocol is not what makes Xibus exceptional. In a totally secure environment, every key component is duplicated. There are at least two transmission paths between workstations and the master node controller, for example, while independent processors in the intelligent socket nodes around the network handle the same task simultaneously.

System security extends to the software. Before implementing any user command whose effect would be to alter or delete stored data, the information is written in its original state to a continuous log.

Each entry in this record system is accompanied by the time and date, the identity of the user or system making the amendment.

The Xibus system provides facilities for reading back through the log to recover data that may have become corrupted. In line with the Xionics philosophy, even the log is duplicated on a Xibus.

The technology devised originally for large scale network installations has now been brought down market with the Xionics MicroNode system launched earlier this year.

Up to eight intelligent workstations can be clustered under a single MicroNode device, with a

total data flow over the lines of about 700 kilobits per second. As nodes on a larger Xibus system, groups of workstations can share common database and printer server resources.

Perhaps the best publicised Xionics installation is at the Cabinet Office in Whitehall: the company was awarded the contract under the Department of Industry Office Automation project.

A manufacturer whose system predates the current state of activity in office automation is Data-point.

The company's Attached Resource Computer (ARC) system has not been designed in the mid-70s as a local area network, but as a short cut to configuring larger computers.

By running co-axial cable between compatible disc drives, processors and workstations, the intention was to create more powerful computing facilities without having to replace existing hardware.

A bonus was that the resources could be distributed throughout an organisation.

The system which emerged was conceived around a co-axial cable joining two hubs – connectors which split the line into 16 branches, each supporting an ARCNET processor.

With a theoretical span of about four miles – a figure determined by the delay in passing a signal between two nodes – ARCNET is amongst the largest network spans available for purely local working. Access to the network is by token passing, a concept analogous to the driver's token which allows authorities a train to enter a single track line.

The protocol is controlled by a Resource Interface Module (RIM) within each processor on the network. ARCNET systems are dynamically re-configured whenever a new resource is added to the system; since every RIM carries a unique identity number with reference to a network, additional processors can be added any where along the line without powering down. This is made possible by the rules for passing the token.

The access token bit is moved between RIM processors in numeric sequence, irrespective of where each numbered RIM may be located in the ring. RIM 1, for example, always looks for RIM 2 which in turn tries to find RIM 3, and so on round the sequence to RIM 1 again.

If RIM 4 is not connected the token will pass from the third to the fifth numbered node automatically. When a new processor is added, it injects a warning burst of data on to the line to indicate its presence on the circuit.

All processors on an ARCNET are multi-functional: they are equally capable of controlling printers as workstations. For devices supplied directly by Datapoint, the RIM is an integral component of the hardware: its operation is completely transparent to the user.

The radically different approaches taken by G.B. Techniques, Xionics and Datapoint illustrate the range and complexity of office automation environments whose requirements must be met. There are clearly defined areas of the market for which Ethernet configurations are inappropriate, and for which a credible alternative has been found.

After all, Lego has carved its own niche out of the construction kit market and it poses little threat of competition to Meccano.

MAKE  
A DATE FOR  
THE UK'S PREMIER  
COMPUTER TRADE EVENT

## The Computer Trade Show '84

Wembley Conference Centre March 13-15, 1984.

Sponsored by Computer Weekly, Practical Computing, Systems International, Micro Business and Software. Organized by Reed Exhibitions.

If you're in the computer business you should exhibit at the Computer Trade Show '84.

The first show in April '83 was universally acclaimed as successful in attracting the right kind of serious visitor – visitors who would mean business for you.

Building on this success, The Computer Trade Show '84 will have an enlarged exhibition area, and a repeat of the highly-targeted promotion used in '83 will guarantee the excellent quality of visitors.

To get further information telephone Chris O'Hara, Exhibition Sales Manager on 01-461 3125 or complete and return this coupon.

# Cut costs with simple command languages

Making software "user-friendly" saves time and money. Ben Shneiderman discusses friendly machines with Howard Karten

ONE of the most popular "buzz-words" of the past year has been "user-friendly". Reading the wealth of information that's been written on this subject, it sometimes seems as though people who decried current "user-unfriendly" software want software that will anticipate and understand a user's wishes, rather than the user's instructions.

In an attempt to clarify the situation, US correspondent Howard Karten spoke recently with one of America's leading authorities on user-friendly software, Ben Shneiderman.

Dr Shneiderman is associate professor of computer science at the University of Maryland in College Park - and head of the newly-formed Laboratory of Human-Computer Interaction there.

He is the author of Software Psychology: Human Factors in Computer and Information Systems, and has coauthored two undergraduate textbooks. He has written more than 80 technical research papers and edited three books.

He is currently editing the Ablex Publishing Corporation series on Human-Computer Interaction and has consulted and lectured for IBM, Control Data, General Electric, Honeywell, AT&T, Bell Labs, Citicorp and university research groups.

Q: How would you define the term "user-friendly"?  
A: "User-friendly" cannot be defined in general - you have to look at it for a specific community and a specific set of tasks.

My favourite example is the Library of Congress Scopia bibliographic retrieval system, which has replaced the library's card catalogue for new entries and which is wonderful for the library staff, who take three to six hours of training and are frequent users.

With users walking in off the street, it's a challenge for them to become competent users in 15 minutes, so that strategy is not user-friendly to them (although Scopia is user-friendly and comfortable for frequent users, such as the library staff).

So the term "user-friendly" is vague and misleading. People don't really want "friendly" systems, they want systems that provide service to them.

They want neither a pat on the back, nor a nasty comment; they want the machine to serve their needs, and they want to have control and mastery of the machine.

I try to stay away from the term "user-friendly" and to focus on specific ways in which the machine serves users - some are best served by a system that requires little training, while others will go through lengthy training periods so their performance can be fast with low error rates.

Some good examples of the latter are air traffic control systems, operating room personnel, or nuclear control room operators. There are some basic functional issues that must be attended to first in designing systems, such as the tasks that the system supports, the privacy-integrity-security questions, the issues of system availability and the cost of the system.

Once these basic functional issues have been addressed, we can talk about human interface issues. Within the human interface, I try to focus people's attention on a specific user community and a specific set of tasks. When you've done that, you can measure user-friendliness by concentrating on (a) the time to learn, (b) the speed

of performance of a benchmark set of tasks, (c) the rate at which people make errors, (d) subjective satisfaction, users' experience, and (e) human retention of those commands over time.

For me, user-friendliness is a function of these five - I keep coming back to those five as I evaluate and design systems.

Q: Why is user-friendliness so important?  
A: As there are increasing numbers of products that provide the proper functionality, low initial cost, and privacy-integrity-security, the competition increasingly becomes over the user interface.

The ultimate cost of a system and its benefit to an organisation will be dependant on how quickly people can learn to use it, how fast they can perform their tasks, their satisfaction, etc.

Q: Then are you saying it is in the self-interest of system designers or sellers to incorporate user-friendliness?  
A: Of course.

Q: Then it's your belief that making a system "user-friendly" is by no means an arcane, academic, difficult task - it's something users

can do right now, in their own shop?

A: Absolutely. Not every study need be a three-month-long experience with thousands of subjects. There are studies we do regularly that take 15 minutes and require six subjects.

The amount of effort you put into the user interface is a function of available funds and the impact of user interface on system performance. There are some cases where people are expending enormous efforts and millions of dollars on the user interface - Lisa is one example of that.

The competition is growing fierce and people's expectations are rising rapidly as they have examples of excellence in microcomputers, and from their growing experience with computers. And those organisations which do not have effective user interfaces will be at a loss in the competition.

I think we will see increased competition from Japan and we'll see exciting ideas coming out of the highly competitive microcomputer marketplace.

Q: How is it we've managed to get by for so long without "user-friendliness"?  
A: The question is a little extreme, since there are examples around of good systems.

Up to this point, just the availability of a certain functionality, eg a certain database retrieval capacity, or a certain payroll function, was so remarkable that manufacturers were able to sell the software and hardware solely because they provided the functionality.

But now, as competition heats up and there are multiple suppliers of that functionality, the competition will move towards providing a better user interface.

It's a maturing of the field, where buyers are more sensitive to the multiplicity of issues they have to deal with.

Q: What are some tools designers can use in designing user-friendly software?  
A: The methods for interactive systems include things such as

menu selection, fill-in-the-blanks and command language strategies. We have increasingly good understanding about how to design those systems competently.

A lot of menu systems we've seen so far have been rather poor, so the frustration frequent users have is understandable.

Any menu system must provide a shortcut path by which frequent users can go directly to the screen that they wish, rather than having to traverse through the menus. We're seeing a number of imaginative ways of arriving at that.

Another area, which is near and dear to my heart, as I discovered my own and other peoples' frustration, is error messages, such as "fatal error, run aborted", or "illegal command", or "OC7".

Some coded messages, such as OC7, do become meaningful and widely known once they're explained. But too many coded messages without explanations, or too many messages to remember, do become a serious source of difficulty.

We have studied that and measured increases in user productivity and satisfaction, so we know this does make a difference, and is

a relatively easy thing to change.

I've been very satisfied that most designers I speak with find this a very appealing topic to get into, because they can make changes to systems that will improve systems with modest effort.

Error messages should be kept all in a single file, so it's easy to make changes and edit for consistency. In addition, putting all messages in one file would permit designers to take the single most important step forward in the error message area: keep track of frequency counts, to find out what are the 10 most frequent errors people are making.

I have yet to find a commercial system which on a regular basis provides a centre manager with statistics about what errors people are making.

Q: Couldn't you do that fairly easily in almost any MVS operating system?  
A: It's not clear that you could. I've worked with Bill Mosteller at

Boeing Computer Services who did put a patch into MVS to collect that data, but it was non-trivial to arrange.

He said there was some difficulty involved in getting a listing in an organised way, by which you could have frequency counts, etc.

But I think it's a useful and simple notion for designers of new systems to find ways in which all the error messages are in one place, rather than scattered through the code.

Q: What are some of the best examples you can think of today of user-friendliness?  
A: I recently saw the Apple Computer Lisa system, which impressed me. The designers of that system thought these issues through very carefully and came

up with a well-integrated, thoughtful design.

That's a good place to look - the (poorly designed) error messages are gone and there are more helpful, explanatory and positively-phrased messages.

I tend to find specific examples within different systems. For example, Control Data Corp's Plasma system has many parts that are very nicely designed and appealing and that make it possible for a novice user to move successfully through sequences of courses.

I was also pleased by IBM's Interactive System Productivity Facility, which helps designers build interactive systems.

I think this is a trend for the future - ie using dialogue management systems to construct interactive applications systems - because there is so much to consider. It's helpful if you have a piece of software that helps you build an interactive system.

In fact, I think you'll see the emergence of dialogue management systems in the same way that database management systems emerged.

Q: What about BAL, JCL, Cobol - would you define those as user-friendly languages?  
A: I don't think so. Those were early attempts at providing functionality in the simplest way and there is a lot of room for improvement in each of those languages.

Q: Can you give us two or three tips that will tell a user or designer if a system is particularly "user-friendly", or particularly "user-unfriendly"?  
A: The soft underbelly is important - error messages and error handling procedures are important to look at, because when something goes wrong, there is clearly a lack of knowledge, a certain dismay and confusion. The question is: "What do they have to do to get out of that trouble?" So I tend to look at the error messages and recovery procedures.

Another thing I look for is how the interface is for novice or intermittent users, compared with how it is for expert users. A well-designed system will serve all those communities, while other systems will be just for experts - requiring long training, etc.

I think it is possible to have, within the same system, rapid performance for the expert and clarity and simplicity for the novice.

This is the great challenge we are now facing, in how to build

SHNEIDERMAN... "The question is, how are the designers going to learn about actual users' performance?"

designers going to learn about actual users' performance?  
Q: What about documentation - does the user-friendly concept extend to documentation?  
A: Oh, definitely. We know that many documents and manuals that go with systems are poorly written, and that can make a 50% or greater difference in time of learning.

Typically, the best solution will be multiple manuals - there will be one short manual which introduces the system to the novice and gets him going, so the user is satisfied to be an expert at "level 1" rather than a vague feeling of knowing three of the 291 commands.

You can organise manuals to give the feeling of competence and teach what I call the "critical mass" of the system - that small subset of commands which allows the user to carry out some useful task.

Manuals should be written from the user's tasks into the system commands - not starting from a detailed, alphabetical listing of system commands.

Q: Is it a good idea to try to retrofit existing software to make it more user-serving?  
A: This is a common problem which I deal with often. You don't want to change things too much, lest you disrupt the installed user base, but you do want to make evolutionary refinements that make it easier.

It is possible to do it - the evolution of Fortran to Fortran II to Fortran IV and now Fortran 77 is a good example; to make that kind of evolution, people do need data from experimental results.

My main message over the years has been, let's get out of this argument over which is more user-friendly or which is better, and put it on the basis of data, of experimentation, of science and engineering.

Many people perceive this (user-friendly or software psychology) field as simply argumentative stuff; I think we can turn it into a field with engineering and science behind it.

We are moving out of a phase of strapping feathers to our arms to studying aerodynamics and the physics of flight, and we're going to build planes that fly higher and faster.

Q: Does the attempt to make systems more user-friendly place an added burden on programmers?  
A: I think so. I think the way to go about that is to decouple the user interface from the functionality.

I think traditional programmers and designers feel more comfortable with just providing the facilities; the user interface should be a separable component of the software. It should be easy to change error messages or commands, whether we use a mouse or a light pen or a touch screen.

Those things should be very much isolated from the underlying functionality, so that as new

# The man who's in love with the three-dimensional world

Is 3-D about to come of age? Datascan's Jeff Corsiglia believes so

AT 36, Datascan's video game division vice-president and general manager, Jeff Corsiglia, is every bit the real-life counterpart of the computer maverick and video game designer who was portrayed in the sci-fi Disney film Tron.

For the past three years, Corsiglia has applied his imagination and determination in an attempt to propel Datascan's video game division to the forefront of video game technology, culminating at this year's CES show where the three-dimensional "Imager" that Datascan helped develop for GCE's Vectrex home video arcade system was unveiled.

Corsiglia discusses Datascan's development of the 3-D Imager in this interview. He also talks about the state-of-the-art in video game hardware and software.

Q: The 3-D Imager seems to represent the state-of-the-art in video game design. What are your feelings now about the Imager specifically, and about the future of 3-D in general?  
A: This seems to be the year of 3-D. The most striking thing about the Imager is that it works with the Vectrex vector system exclusively.

The vector system draws a very bright, intense line on the screen unlike raster systems which are found in most home TVs. It's difficult to get convincing 3-D with a home TV set. By comparison, Vectrex has its own built-in screen that performs a line-drawing function against a blank background so that the video objects appear to be floating in space.

When these bright, intense lines are processed through the Imager, the colours, and the sense of space and depth that the 3-D Imager provides are very, very strong.

Overall, we're in love with 3-D. We see 3-D being very important to video games and to other forms of entertainment. As for the future, we're currently researching other modes of 3-D.

Q: How did Datascan first become involved with the design of the Imager?  
A: We had been designing games

for several video game systems including the Vectrex system, and it became clear to us that this unique line drawing capability could be exploited in a 3-D mode very effectively.

Q: You ended up with a breakthrough opto-mechanical system?  
A: Well, yes, the conceptual leap here was taking the rotating optical path device and incor-

porating it into the glasses to make it practical. The actual design of this device allowed us to generate a low-cost, feasible 3-D device for the home.

Q: Looking at the video game industry as a whole, where are we at this particular point in time?  
A: First and foremost is feasibility. It's very easy for non-technical people to fall in love with an idea.

Since the actual programming process is understood and practised by very few people, collaboration between programmers, graphic designers and game play experts is critical.

Marketability is also imperative. And that goes hand-in-hand with playability. We have to remember that a video game is a toy. It is an interactive device that somebody plays with. You don't sit back and passively view the video game, you must interact.

That means the game must have play value. Unfortunately, that playability has been conspicuously missing from several famous, recent video games with super-hot titles and tremendous amounts of marketing horsepower.

These games burn-out quick

because they are lacking playability. That's the bottom line. The strongest way to market a video game is on its honest playability.

Q: Datascan is also deeply involved in educational software. Is there a different orientation to educational video games?  
A: In the past, educational software has not been terribly exciting and I think that is unfortunate. There's something about the way a video game functions that appeals so fundamentally to a child that effective play elements need to be applied to educational software.

We've been working very closely with several experts in the educational field to develop a number of lines of educational software for video games, home computers and CPM-based computers.

We're targeting the video game educational programs at pre-schoolers and very young school-age children because of the ease of using the system. These products will be tested first in educational laboratories.

Their teaching objectives and their ability to meet those objectives will be quantified before we consider the marketing of any particular program.

Q: Another key area for Datascan is the adaptation of film themes to arcade and com-

puter games.

Q: You seem to heavily emphasise the aspect of concept evaluation. What steps do you take in evaluating a prospective game concept?  
A: First and foremost is feasibility. It's very easy for non-technical people to fall in love with an idea.

That means the game must have play value. Unfortunately, that playability has been conspicuously missing from several famous, recent video games with super-hot titles and tremendous amounts of marketing horsepower.

These games burn-out quick

because they are lacking playability. That's the bottom line. The strongest way to market a video game is on its honest playability.

Q: Datascan is also deeply involved in educational software. Is there a different orientation to educational video games?  
A: In the past, educational software has not been terribly exciting and I think that is unfortunate. There's something about the way a video game functions that appeals so fundamentally to a child that effective play elements need to be applied to educational software.

We've been working very closely with several experts in the educational field to develop a number of lines of educational software for video games, home computers and CPM-based computers.

We're targeting the video game educational programs at pre-schoolers and very young school-age children because of the ease of using the system. These products will be tested first in educational laboratories.

Their teaching objectives and their ability to meet those objectives will be quantified before we consider the marketing of any particular program.

Q: Another key area for Datascan is the adaptation of film themes to arcade and com-

CORSIGLIA... The real life counterpart of Tron's Computer maverick?

You have to look for video game-like behaviours which can be adapted to video games and can be used as building blocks for a good video game.

We've had success ourselves in doing these adaptations and we feel that if people who have film material want to assess its appropriateness for adaptation, we

## BOOKS

### How life at work is always changing

Computerization of Working Life. Edited by E. Fossum. Ellis Horwood.

ONLY two out of five chapters live up to the expectation generated by the title of the book Computerization of Working Life.

The book, a collection of papers by researchers at the Norwegian Computing Centre, is number 24 in the series Computers and Their Applications - and it suggests that the series is becoming rather tired.

The book takes a long time to get going. There is a foreword; then a preface; then an introduction.

It is page 21 (out of 143) before the first paper appears.

The best chapters are numbers two and three.

The first is on the impact of

technology on employment, with some hard facts and figures leading to, unfortunately, a rather depressing conclusion.

The other is on working with display terminals. It describes the usual staff complaints and problems and considers ways of avoiding the troubles, or suggests ways

to solve them. At the beginning the authors are described as researchers of distinction. It is a pity that most of their papers do not live up to that distinction nor to the promise of the book's title.

John Kavanagh

## Manage the people in computing

Needed: Professional Management in Data Processing. John Callahan. Prentice-Hall.

"HOT-SHOT" technology performers do not necessarily make sound managers. "That is the parting shot from John Callahan at the end of his book, Needed: Professional Management in Data Processing.

The message comes through loud and clear throughout an excellent, extremely readable book which deals with the management of the data processing department - the people - and barely mentions computers at all.

Callahan takes a negative approach almost throughout: he describes typical management methods and the assumptions managers have about different types of people working for them - and shoots all these methods and assumptions down in flames.

Here lies the book's possible weakness. Some readers could be irritated and frustrated by this constant criticism of their methods.

But the way Callahan exposes typical management shortcomings, often with a series of questions, makes the serious reader stop and

think deeply about the way he or she works.

In 195 pages Callahan covers staff selection, motivation, career prospects, performance evaluation, planning and project control, dealing with problem staff and the data processing industry's disease of burn-out.

Callahan's book should be recommended reading for all data processing managers who want to get the most out of their staff and at the same time keep them happy - or just keep them.

John Kavanagh

## Two dates to remember

The importance of software in the computer market place, as the part of a computer package that actually brings the system alive and meets the customer's applications has never been greater - that's why you should make a diary date now not to miss two very important events:

**NOV 15-18 '83**  
Software Village  
at  
**COMPEC '83**

1: First is the Software Village at Compec '83 which is greatly expanded on previous years and will be an integral part of the Show in the West Hall, Olympia, London, November 15 - 18 1983.

**JUNE 5-7 '84**  
software '84

2: The second is the recently announced new Software '84 exhibition and conference. A show devoted entirely to the subject of business and professional software at Earls Court, London, June 5 - 7, 1984.

Both shows are organised by Reed Exhibitions, the country's largest business exhibition organisers, and sponsored by Computer Weekly and Software in association with Systems International, Practical Computing, Micro Business and Computer Talk.

For more information contact the Exhibition Manager, Compec '83 at Software '84, Reed Exhibitions, Surrey House, 1 Throby Way, Sutton, Surrey SM1 4QQ. Telephone: 01-643-8940.

## Crisis can be avoided when developing software systems

Formal methods of Program Verification and Specification. Berg, Roebert, Franta, Moher. Prentice Hall. Software Verification and Validation. Deutsch. Prentice Hall.

THE justification for both of these books is that the development of software systems has not always proceeded to a satisfactory conclusion.

Systems have been implemented late, over cost and, in particular, with significant faults still present. Both books mention the "software crisis" and both attempt to introduce various potential methods of avoiding it.

Berg *et al* deal with the theoretical application of formal mathematical reasoning to the development of software. This applies mainly to the verification stage of software development.

In order to prove a program mathematically a complete definition of correctness is required. The authors therefore introduce techniques of formal specification as well as validation.

While obviously containing mathematical arguments, the book can be read and appreciated for its ideas and concepts. It is well structured and surprisingly easy to read considering the complexity of the subject.

The authors do not actively prescribe, they describe as they understand the problems of practical implementation.

However, as a source of information on this increasingly relevant area the book is excellent.

Each chapter is preceded by an introductory general section and a

summary follows. The index is well constructed and follows a comprehensive list of reference.

It is unlikely that formal mathematical specification and validation will be practical in a wide sense until formal specification and programming languages are used more generally. Perhaps fifth generation computing will be able to take advantage of these techniques.

Anyone interested in computing developments or wishing to introduce themselves to formal verification can approach this book with confidence. Its clear structure and understandable text provide an excellent introduction to the subject.

Deutsch's Software Verification and Validation, whilst addressing the same problems, takes a much more pragmatic view.

Published as part of Prentice Hall's software engineering series it is designed for practical use.

In this respect it has one disadvantage - it is not easy to read or understand. The practising manager will find parts of the book heavy going.

Nevertheless, perseverance will be rewarded with valuable insight into avoiding the pitfalls of software verification.

The first part deals with the concepts of software validation including an overview of the remainder of the book. Deutsch explains the enormity of attempting to test completely all paths through a program and introduces more pragmatic methods.

Part II describes various testing methodologies - in particular the use of the SVD (System Verifica-

tion Diagram), refined by the author's company, Hughes Aircraft.

The SVD represents the software requirement complexity consistently, so that the results are testable.

The method described is based on testing small elements as they are built, not attempting to test the whole system at the end. In special problems of real-time, or other particular systems are a planned and recommended made.

Automated testing using various tools at various stages is described in the third section, which stresses the importance of defining partial testing at the onset.

All software life cycle steps should take account of the need to verify and validate. Part IV on testing into the context of various project stages and illustrates the well known principle of detecting errors as early as possible.

Finally, the author considers future trends in both the managerial and technological area.

Software Verification and Validation is a valuable aid to practising managers and technicians, as well as students of computing. However, it requires careful reading and analysis in order to gain useful information.

Formal Methods of Program Verification and Specification is interesting and would be of use to anyone who wishes to be well informed in this new and developing field.

W. B. Scott-Jackson

## Defining the principles of securing private data . . .

Principles of Data Security. Error. Leiss. Plenum Publishing.

COMPUTERS are being used to hold more and more information of private or confidential nature. Credit information can be obtained by various agencies; hospital records, personnel files and so on hold personal data in relatively centralised databases; and social surveys involve statistical analysis of large bodies of information.

In addition the methods of accessing such information are becoming much simpler to use. Enquiries can be made on many keys using English language instructions (eg the Atomic Energy Research Establishment's Status or ICL's CAP).

A great deal of private data is therefore available and is mechanically easy to get at. In these circumstances, security becomes of crucial importance.

Principles of Data Security

addresses this vital area of computer science.

Dr Leiss is able to present complex theories in an understandable way.

This, combined with his concern that the theories should be practically applicable, makes the book interesting reading.

Occasionally his undisputed conclusions are quite startling. For instance, as a layman, it is surprising to find that one's intuitive belief that statistical analysis cannot break individual confidentiality is incorrect.

Methods for preserving that confidentiality are given. Other areas covered include authorisation systems, cryptography and digital signatures.

In common with many other theorists Dr Leiss tends to use two words where one would do. Such phrases as "Thus we submit that we have here a case at hand where

... do not lack understanding. New word constructs such as "undecidability" can also detract from the text's impact.

As a computer scientist Dr Leiss fully appreciates the time lag between the acceptance of scientific theory and its practical application.

His book may serve to accelerate the process, because of its practical orientation.

It is intended for professional system analysts and data managers as well as computer scientists.

Analysts and managers might be unwise to wait for the next stage in the movement from theory to practice.

In the same way that complex theories finally merged as practical guidelines for structured programming, so will guidelines for database security be developed given time.

W. B. Scott-Jackson

## . . . and history of their abuse

Computer Insecurity. Adrian Norman. Chapman and Hall. £14.95.

TO SAY that computer insecurity is modern would be denying much that happened during the early days of computing. Right from the early days unscrupulous people have looked into ways of making easy money from their installations.

The author also hopes that if computer crime is better reported, subsequent tighter security will cause a decline in such crime similar to the control of hijacking since the 70s.

The case histories he quotes are by his own admission not all true stories, but he feels that the lesson

in them outweighs the fact.

He draws a parallel between cracking a safe and cracking an operating system or database, which illustrates the quality of his writing, and although the book would have benefited from more photographic evidence, he avoids using jargon as much as possible.

After examining the reasons and motives of each case quoted, suggests ways that might be used to prevent any recurrence. His ideas will make this book a standard reference for the future computer user.

Colin O'Keefe

## PRODUCTS

The RX80 F/T printer from Epson UK.

### Epson adds to printers

EPSON (UK) is launching a printer to complement its existing range.

The new printer, the RX80 F/T is aimed by Epson to fill a customer need for a printer with all the features of the RX80 but offering both tractor and friction feed.

Priced at about £350, the RX80 F/T has dot addressable graphics, condensed and double width printing, Centronics parallel in-

terface as standard and a print speed of 100 characters per second.

Friction feed facilities allow single sheets of paper to be used, making the printer suitable for production of standard letters and presentation documents.

Epson (UK) (CW), Dorland House, 388 High Road, Wembley, Middlesex HA9 6UH. Tel: 01-902 8892.

The SL-2340 Standard Cell Design Workstation.

### Versatile workstation

THE SL-2340 Standard Cell Design Workstation from Silvaco

is said to be the first workstation to combine data capture, simulation and standard cell layout tools.

The turnkey system offers fast standard cell integrated circuit development, from logic design and simulation to physical layout using "efficient placement and routing software" say the manufacturers.

Priced below £100,000 (for single unit quantities) the system combines many design tools such as schematic editing, netlist extraction, hierarchical database, hierarchical design expansion, logic simulation, standard cell placement and routing.

Optional design tools include fault simulation, system and register-level simulation. Timing verification will be available soon.

Integrating a subset of Silvaco's SL-2000 Integrated Design System and the Powerful Apollo DN300 computer, the SL-2340 claims to be a price-performance breakthrough for standard cell design systems.

Silvaco continues to offer the same software capabilities of the SL-2000 system on DEC/Vax, Prime and IBM computers. Additional application specific workstations will soon be introduced.

Silvaco-Lisco (CW), 3172 Porter Drive, Palo Alto, California 94304.

### Blue Box interface

TWO fibre optics communications products have been introduced by Lightdata.

The Blue Box is a 16-channel RS232 interface that is said to be simple to install and use. The received light power is displayed and can be used to set up and monitor the performance of a fibre optic link of a kilometre or more.

The Blue Box is housed in a die cast box and intended for mounting on walls.

Lightdata's other product is a 16-channel full duplex fibre optic TTL interface.

Output power is adjusted through the front panel and received power is displayed on the LED meter.

### Software for the HX-20

TRANSAM has produced a machine code program in ROM which can either be installed in the main body of the HX-20 or the expansion unit. The software has two parts. One is an editor, the other a program which enables the HX-20 to act as an intelligent terminal.

The ROM transforms the HX-20 into a communications link. The link may be made via a cable, or via a telephone line. A battery powered acoustic coupler is available from Transam.

The text, once prepared, is saved to a file and can be sent using the terminal, or alternatively can be printed immediately on various outputs of printer.

Transam Microsystems (CW), 59/61 Theobalds Road, London WC1X 8SF Tel: 01-405 5240.

## Short cuts for systems designers

PROTEL Computer Systems has launched a new stage of its development with the announcement of ready-made printed computer circuit boards.

The Protel design team has several substantial orders to its credit since the company went operational in October 1981, including an extensive operations support system for TV-AM and a lines scheduling system for the British Independent Broadcasting Authority. This phase of development has made available for sales not only the five functional systems provided in TV-AM, but also virtually all the individual building blocks required for the 25 other functional systems so far identified.

One of the products that Protel now markets in its own right is the basic Protel Model 2000 printed circuit board, based on the advanced 16-bit Motorola 68000 microprocessor. This has led to a high-performance range of boards with wide applications in the component market for the systems designer and are particularly suited to process control and to industrial educational and certain computer functions.

Built on extended double Euro-card and implementing the VME bus, the boards are proven in Protel's own systems, used in the professional television and broadcast industries. Now available are CPUs featuring RS422A and RS232C ports, seven interrupt levels and 32 bytes of static RAM or 64 bytes of EPROM; dynamic RAM units up to 512Kbytes, bytes parity check and on-board refresh; and serial I/Os with eight serial ports, RS232C or RS422A,

programmable baud rates and direct memory access.

For designers intending to develop a local area network further boards are available to allow for the incorporation of a comprehensive interface Ring I/O System known as Comspeed.

Developed by Protel engineers, the Comspeed Ring is a serial communication system which permits computers and other devices to be inter-connected, and embodies the principles of the Cambridge Ring. Messages are sent around the Ring serially in packets of 38 bits, each packet conforming to a standard bit format. The data rate can be up to 10Mbits per second.

The Ring consists of two pairs of serial circuits, primary and secondary, each carrying composite data and clock information together with the 50V supply, which is used for powering ring repeaters.

The Ring can also be of the braided variety which allows localised faults to be easily bypassed.

The Comspeed Ring I/O system utilises a Ring I/O board, containing 68000 microprocessor and interfacing for the VME bus and the two I/O ports. This board is used in conjunction with the Protel Ring Repeater Board 2015 or 2020. The Model 2015, providing eight ring outputs, can support up to 16 ring nodes, while the model 2020 gives a single ring port and is the sister board to the Comspeed Ring I/O Board.

Protel Computer Systems (CW), Watford House, Eastgate Court, Denmark Street, Wokingham, Berkshire. Tel: (0734) 785440.

The Tinsytalker speech evaluation board from TI.

### Male or female speech

TEXAS Instruments has produced a new version of its Tinsytalker speech evaluation board. It incorporates the TMS52XX, an 8-bit compatible LPC (linear predictive coding) synthesiser chip capable of producing "male" and "female" speech.

The module will speak any one of eight pre-selected phrases at the touch of a button. It powers-up automatically for speech output, and powers-down on completion of the selected phrase.

This allows the use of batteries (2 x 9V) for module power supply. Alternatively a single-rail supply of 12-18V may be used. The module is self-contained,

with a speaker and power amplifier capable of delivering up to 1.5W. A miniature jack for the connection of an external speaker and a volume control are provided. A two-hole filter is used to eliminate sampling noise from the output of the TMS52XX's digital-to-analogue converter.

Priced at £68.75, the board comes with an evaluation EPROM (comprising four female and four male phrases).

TI says that other phrases can be processed by its Portable Speech Lab analysis system. Texas Instruments (CW), Manton Lane, Bedford MK41 7PA. Tel: (0234) 67466.

### Microfilming as a matter of form

THE Micromatic Model 370 continuous forms camera is capable of filming forms up to 14.5 inches wide at 24x, 28x, 35x or 40x reduction.

With this reduction facility, the Model 370 gives the user the opportunity of recording from 2,500 to over 4,000 11in forms on 100 foot of standard film at the rate of over 100 forms per minute.

At no extra cost to the user, interchangeable forms feeds can be fitted to the Micromatic continuous forms camera to cope with feeding single documents. An automatic exposure control and a built-in blip feature on each frame are included in the basic price of £3,250.

The dual purpose Model 370 is designed for companies or organisations which have computer print-outs and continuous stationery such as invoices, statements, listings, etc which are required to be stored on microfilm for security or as the alternative to bulky paper files. Additionally, the equipment will film single sheets.

Remoffice Systems (Bristol) (CW), Vale Lane, Hartcliffe Way, Bristol. Tel: (0272) 662331.

The Micromatic Model 370 from Remoffice Systems.

### Turtle comes in a low-cost version

JESSOP Microelectronics, manufacturer of the Edinburgh Turtle mechanical robot, announces the introduction of a £165 low-cost version.

The considerably reduced price has been achieved by re-designing the computer interface so that it now operates in a parallel mode, rather than Serial RS232. This in turn has necessitated the development of several interface types, each designed for a particular microcomputer. These will be incorporated into the computer connection cable junction box.

The Turtle itself will be identical for all computer types.

Interface sets will be produced initially for the BBC computer and will soon be followed for the RML and Sinclair machines.

The Edinburgh Turtle was developed by Dr Jim Howe and his team at the Artificial Intelligence Department at Edinburgh University, and is manufactured under licence by Jessop Microelectronics.

Jessop Microelectronics (CW), Unit 5, 7 Long Street, London E2. Tel: 01-739 3332.

## Image processing software updated by Toltec

TOLTEC Computer, manufacturer of the DataRing local area network, has announced a new release of the Semper package for image processing, analysis and simulation which, it claims, provides the user with advanced, fully interactive image processing facilities in an easy-to-use system.

Semper V is said to be suited to

a variety of image processing fields. Recent applications include electron microscopy, research into visual perception and synthetic aperture radar processing.

Semper V, written in Fortran IV, can be run on a wide variety of computer systems. Commands may be entered interactively at the terminal or combined in Semper

programs, and the package can be modified easily by the user to incorporate special processing commands if required.

Semper V's features include procedures for grey-level manipulation, arithmetic, averaging, alignment, filtering, Fourier transforms and correlation; a choice of display modes including

contour maps and perspective displays; and a spot or crosshair cursor to indicate positions with pictures on a display screen.

Use of magnetic tape for additional or archival storage is available.

Toltec Computer (CW), Thompson's Lane, Cambs CB5 8AQ. Tel: (0223) 312347.

EXPERIENCED

**SOFTWARE ENGINEERS**

ARE YOU INTERESTED IN WORKING ON THE DEVELOPMENT OF OUR NEXT GENERATION OF COMMUNICATIONS EQUIPMENT?  
HANTS/DORSET COAST TO £12K

If you have three or four years' sound experience including programming in a high level block structured language such as CORAL, PASCAL or RTL-2 in a process control, Telecommunications or similar real-time environment, then you will be of interest to us.

The project is currently based on MASCOT, with an update to ADA in a subsequent phase, and will involve you in such areas as installation handling, call management and distributed database.

We can also offer you the opportunity to take total development responsibility for one or more subsystems.

If your experience is not precisely as outlined above but includes real-time software development then you may still be of interest to us.

We can offer you comprehensive relocation expenses as well as an excellent commencing salary and benefits package, to complement an exciting career and prospects.

For further information please call Myriad on Reading (0734) 591151 or write to the address below.

**OPPORTUNITIES IN OIL-LIBYA**

Our client, deeply involved in petroleum research, is in need of the following professional personnel to work in the Research Centre located in Tripoli.

**Systems Analyst/Designer**

The Job: to investigate the best method of matching present equipment to meet the system needs and identify and review activities suitable for data processing operations. As well as being heavily involved in designing systems and planning for their implementation, the successful applicant will control and co-ordinate new system conversions. In the area of technical assistance, special emphasis will need to be placed on problem identification, organisation analysis, conversion planning plus formal/report control and analysis.

The Person: will have a bachelor degree in Computer Science or Mathematics with 10 years experience as a Systems Analyst, and must have already designed a number of systems. Preference will be given to applicants currently working in, or with very recent experience of Research Controls, Universities or in the Scientific field.

**Systems Programmer**

The Job: to design and test programme logic, select sub-routines and other special software in order to develop techniques for use in the programmes. There is also a requirement to train programming staff.

The Person: will have a bachelor degree in Computing or Mathematics, 10 years experience as a Systems Programmer, and must have already designed and written a number of Systems Programmes. Applicants must have been engaged in writing programmes in the scientific field, University Research Centres or other related areas which would indicate an excellent knowledge of operating software and high level technical proficiency. Job Ref. No. PRC/5.

Short-listed applicants will be advised of the remuneration and benefits package at the time of interview.

Please apply, in writing only, quoting job reference number, for an application form giving brief details of your work experience, or submit your C.V. to: R. Nash.

SPECIALIST RECRUITMENT CONSULTANTS

## CONSULTANCY

### LONDON

#### Circa £16,500 + CAR

A leading international consultancy has openings for top-calibre D.P. Professionals who have either good all-round commercial applications experience, or specialised experience in international banking or insurance.

You will need to meet all the following requirements:

1. Good degree
2. Perfect communication skills and professional manner
3. 25 to 32 years old
4. Proven track record, either in a variety of application areas or in international banking or insurance

You will mainly be involved in pure consultancy, but also in project management. This is seen as a logical career step for high fliers who have proved themselves in a user environment and are ready to move forward.

For further information, please contact MARK IRENS quoting reference CW1108/3.

SPECIALIST RECRUITMENT CONSULTANTS

# Senior Project Managers

(with a difference\*)

**Thames Valley**

**c.£15K+ car**

Our client is a small systems house with a phenomenal growth rate - it will achieve over £1M of turnover in its first year of operation, with profits to match - and future business in the pipeline to maintain this momentum. The directors to whom the successful candidates will report are very experienced computer technicians with skills covering both hardware and software who can demonstrate entrepreneurial abilities of a high order.

These appointments offer quite exceptional opportunities, not only to work in a very stimulating environment but also to influence in a meaningful way the future development of the company.

Candidates must have a successful track record in completing multiple projects (utilising up to 10 analysts/programmers) on time and to budget which, preferably should include experience involving contract personnel.

Substantial familiarity with TP software is very

important, including DME, TME or CICS or ZILOG systems. COBOL is the most heavily utilised language.

Preference will be given to people with well developed interpersonal skills because it will be necessary to represent the company at all levels of client management. Knowledge of the Local Authority or Health Care market would be advantageous in the short term but there is potential to make use of a wide range of application experience.

Remuneration is negotiable but unlikely to be a limiting factor and the intention is to recognise and reward good performance with an above average package. Working conditions are good and plans are already in hand to move to larger premises as the need arises.

\*To find out about the difference call Bruce Crammond on 01-631 4184 or send a detailed C.V. to:  
A&A Consultants (Holding) Ltd., County House,  
10 Little Portland Street, London W1N 5DF.

# SENIOR APPOINTMENTS - £14K +

## CUSTOMER ENGINEERING MANAGER

**WEST MIDLANDS**

**SALARY CIRCA £16,000+CAR**

A highly successful, innovative U.S. Organisation, we design, manufacture, service and support computer and office automation products spanning the technologies of Data Processing, Word Processing, Image Processing, Audio Processing and Networking. Since the early 1950's we have been shaping the modern office. Today we are the Company that is leading the world in office automation through the provision of versatile and cost effective systems.

Our product strategy has demonstrated a commitment to balancing the needs of people with the use of technology - our goals are high, our approach is unique.

Customer engineering personnel and facilities are continually expanding to keep pace with our ever growing customer base. It is such expansion that has created the need to appoint a Customer Engineering Manager within our West Midlands Branch.

The range of skills required are varied but essentially you should demonstrate an excellent record of man-management spanning a minimum of 5 years plus demonstrable success in the customer liaison role. It is envisaged that you will have a minimum qualification of HNC or equivalent in electronics and ideally be aged between 30 and 35.

**The Royal Borough of KENSINGTON AND CHELSEA Computer Service**

## PROJECT MANAGER

£13½k-£15½k p.a. incl.

At the Royal Borough of Kensington and Chelsea we have a lively and professional D.P. section.

In addition to the financial systems found in any large organisation, we have a variety of interesting work in areas such as Housing, Engineering and Social Services.

A very high standard of work is expected from all our staff who follow a structured methodology for project development.

An IBM 4341 is in use with DQS/VSE and VM. So far, 70 terminals are attached.

All current projects involve on-line development using COBOL and CICS. APL and other personal computing facilities are being introduced and will run alongside our more major developments.

We are seeking a Project Manager for one of our 3 development teams, whose duties will include:

- planning and organising the work of a 5-member team through all stages of project development
- undertaking major tasks within the feasibility, analysis and implementation stages.

He/she should have 7 years D.P. experience and be able to demonstrate the ability to perform the above tasks.

In return, we offer a friendly working atmosphere in pleasant modern offices off Kensington High Street, excellent training facilities, generous holiday arrangements, flexi-time and an active Sports and Social Club.

For further details, ring Tony Eldred on 01-837 5464 ext. 330.

Application forms quoting Ref. CW/385 from the Personnel Service, The Town Hall, Hornton Street, London W8 7NX.

Tel: 01-837 5562 (24 hour answering service). Closing date for applications: 30th August, 1983.

Applications are welcome from suitably qualified disabled persons.

Quadrant House, The Quadrant  
Bishop, Surrey RM2 8AR

# International Data Centre and world-wide Telecommunications

Our Client, based in a pleasant environment close by the M1 just north of London, continues to make impressive advances within its field. The Company has a wide range of IBM and other vendor computer equipment processing on-line and batch systems for its operating divisions and subsidiaries across UK and Europe and has telecommunications links to the U.S.A., Africa and Australasia. A thorough appraisal regarding future strategy has recently been completed resulting in requirements for a number of dedicated computer professionals. Serious career oriented men and women will want to examine the outstanding opportunities this organisation can offer.

A number of these positions involve international travel.

## SYSTEMS SOFTWARE & SUPPORT

**Systems Programmer c.£14,000**

**Senior D.P. Specialist up to £12,000**

**APL Specialist up to £12,000**

Three vacancies are on offer. Firstly there is a requirement for a Systems Programmer who has considerable experience of working in an IBM mainframe environment on a range of software which includes MVS/SP, JES3, RACE, ACEVTAM, IMS DB/DC, Roscoe, and TSO. Quote ref. CW 735

Secondly, they require a D.P. Specialist for an interactive support role, who is fully conversant with all areas of IBM software. To advise customers on how best to maximise the efficiency and scope of the system including security, maintenance of software products, planning user requirements etc. Quote ref. CW 734

An essential part of both of these jobs is short-term European travel; therefore a high element of self motivation and personal commitment to achieve company objectives will be required.

Finally, there is a position calling for an APL Specialist. This person will support a variety of software and user requirements. Previous bureaux experience would be most appropriate. Quote ref. CW 736

## Capacity Planning Specialist up to £14,000

Forecasting user computer demands and utilising modelling techniques to interpret requirements for component upgrades calls for a very specialist skill. The company has recently installed the latest GMP package for capacity planning purposes. Knowledge and experience of IBM hardware and software is essential. The ability to use modelling tools and techniques, inquiry facilities such as APL, SAS and Easytrieve would be desirable. A high degree of initiative and inventiveness, working without supervision is required. Close liaison with customers in the development of workload forecasts, offering them advice on updates in the rapidly changing DP environment will be very important. This will necessitate European visits. Quote ref. CW 739

## Standards Co-ordinator up to £12,000

This is a newly created position. It requires self motivation and the ability to initiate and co-ordinate activities in a multi-disciplined and internationally based operational and technology support environment. Success in the job will be measured by the general acceptance of and adherence by users to the technical standards and procedures put in place by the applicant.

You will be responsible for reviewing the existing technical documentation, standards and procedures and rationalising all documentation into user guides and manuals. Computer technical writing or broad IBM operational experience in mainframes or telecommunications should enable you to co-ordinate the information necessary to formulate standards and procedures and to communicate them to users in clear concise written English. In fact you would be required to act as the focal point for all matters relating to computing and telecommunication standards and procedures. You would also be responsible for assisting with implementation and for auditing compliance with these standards. Knowledge of at least one of the following is essential:

- \* IBM MVS/SP
- \* Roscoe or IMS or TSO
- \* COBOL
- \* JCL
- \* Broad IBM operational experience including fault diagnostics, recovery procedures and remedial analysis.

As much of the operational information required for this job resides on APL data bases, a working knowledge of APL is highly desirable. Quote ref. CW 740

All the above call for a good standard of education, although solid experience in the respective fields and good communication skills will be prime requisites.

The company operates a full training programme. Benefits include free life insurance, BUPA, subsidised restaurant facilities etc. In appropriate circumstances a comprehensive relocation package can be made available. Act now by sending a comprehensive career resume or telephone for an application form in strict confidence; quoting the appropriate reference number. You may mention companies to which your application should not be forwarded. Ray Diamond,

# GERRARDS

**Gerrard Recruitment Services**

37 Chapel Side, Moscow Road, London W2 4LJ. Tel: 01-221 3348.

## NETWORK RELATED VACANCIES

Great reliance is placed on international telecommunications systems within the organisation. This comprises a private data network providing batch, interactive and teletype access to mainframe computers, a speech network and message transmission network. These should be well planned, cost effective with a high availability and meet the business needs of customers.

## Network Planning Specialist c.£11,500

The person we seek will assist in the planning, evaluation and control function, to ensure that capacity and topology matches evolving traffic patterns and that the benefits of modern technology are identified and secured. An analytical approach to problem solving and practical familiarity with telecommunications equipment and practices will be essential. Some European travel will be involved. Quote ref. CW 737

## Network Engineer c.£10,500

Specifically to install, commission and trouble-shoot a range of equipment including modems, statistical multiplexers and switching modules throughout the UK and Europe. An understanding of data-communications at an operational and technical level is essential. Familiarity with the technology of voice and message systems would be a distinct advantage. Documentation skills and practical experience are sought as client regards both as essential. Quote ref. CW 738

## OPERATORS

Personnel are required to further strengthen the highly professional Operations Unit. This installation currently utilises an IBM 3083, 4341 and an AMDAHL V8 running MVS/JES, VTAM, IMS, TSO and ROSCOE with an extensive telecommunications network.

## Shift Supervisors c.£8,200

+ shift allowance

Shift Supervisors should have IBM MVS Operations experience, at least 2 years in a supervisory role and a thorough working knowledge of JCL, utilities and teleprocessing, together with an effective operating knowledge of interactive systems, especially IMS. Their role will be to ensure integrity of system and user data, handle user enquiries, diagnose, refer or solve system and user problems, monitor and report on hardware and teleprocessing systems, and supervise a team of operations personnel. Because of shift working, own transport will be necessary. Quote ref. CW 743

## Senior Console Operator c.£7,000

+ shift allowance

For this post IMS on-line (particularly Master-Console) experience is essential. Applicants should have had considerable IBM MVS operations experience, display a mature outlook and have their own transport. Duties will involve working closely with a Shift Supervisor to ensure a high level of availability and responsiveness to the processing needs of our client's user community. Quote ref. CW 742

## Network Administrator c.£7,000

Voice and Message Systems Management Services seeks an experienced Co-ordinator. Ideal for someone with experience gained in a large commercial or PTT telephone exchange or communications centre seeking a career in the international communications network field.

Duties will involve co-ordinating administrative activities associated with all network services including test procedures, fault control and traffic analysis costs and records, billings, directories and operating the computer based network real time status system to measure traffic on the voice system. Quote ref. CW 741

# MANAGEMENT & EXECUTIVE SELECTION

telephone 01-637 9611

## Move to a better way of life

## SOFTWARE ENGINEERS £8½-14k

*If you enjoy the rush hour... then don't read on!*

Situated close to the beautiful Cotswolds countryside, one of Britain's leaders in advanced technology, is seeking software engineers to work on new and exciting projects. You need to have a good education, preferably to degree level, with two years' experience, particularly working in a real-time environment. Ideal candidates will have a combination of the following: GRAPHICS, MINIS AND MICROS, ASSEMBLER or HIGH-LEVEL LANGUAGE.

Exceptional facilities and benefits are offered including a high salary of between £8,500 and £14,000, a full relocation package, paid overtime, generous subsistence allowance whilst moving house, sports and social clubs and pension scheme.

Commitment to advanced technology is total and therefore our client recognises the benefit of extensive on-going training.

For further information and an immediate interview, please telephone Nick Marsh or Karen Whelan on 01-637 9611.

**MANAGEMENT &  
EXECUTIVE SELECTION**

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

# Computer Professionals to the future.

IBM United Kingdom Limited is looking for experienced and career-minded computer professionals to work in its Information and Business Systems Group at the company's headquarters located at North Harbour, Portsmouth.

The Information and Business Systems Group is a service function within IBM United Kingdom Limited which supports a wide range of application systems and end-user services within the company. We are currently engaged in the development of host, distributed and office systems using the latest techniques and are looking for a number of men and women with proven experience to help us meet the business needs of the company. If your background and experience matches one or more of the following then we will be interested to hear from you:

- Two years' programming experience using PL1, IMS, VSAM and TSO/SPF. Experience of IPT would be an advantage.
- Two years' programming experience in a System/34 or System/38 environment using RPG11 or RPG111.
- Three years' programming experience using PL1, IMS, VSAM and IPT. You should also be capable of dealing directly with a wide variety of end-users at all levels, and have worked on all project phases from gathering requirements through to implementation. Data analysis and IMS DB/DC design experience would be an advantage.
- VM/CMS experience (in either a central site or distributed environment) with practical knowledge of APL or other end-user languages such as the APL.

based packages (ADI, ADRS, APE) or query languages such as SQL or QBE. Knowledge of PL1 or EXEC2 development in native VM mode would be an added advantage.

• Office automation environment working with products such as PROFS, DISOSS or 8100/DOSF.

We offer competitive salaries supported by a generous range of benefits including BUPA membership, free life assurance and contributory pension scheme. Opportunities to develop your skills within our progressive environment are excellent.

With the South Downs on one side and the coast on the other, the location is first class. As well as the many historical attractions Portsmouth offers a host of outdoor leisure activities.

If you can match our requirements, please write with full details of your career to date, to: B.M. Fairingside, Information and Business Systems, IBM United Kingdom Limited, P.O. Box 41, North Harbour, Portsmouth, Hants PO6 3AJ. Please quote reference: CW/8243.

- 15,000 jobs in over 40 UK locations
- Two manufacturing plants
- Development laboratory near Winchester
- An equal opportunity employer
- £522 million exports in 1982
- £119 million invested in UK in 1982

# Business Systems Analyst

c.£11,500+ Bonus+ Company Car

Midlands based

European Travel

Our Client is a highly successful International Sales and Marketing Organisation, selling a range of quality products through subsidiary trading Companies throughout Europe.

This Senior position carries responsibility for reviewing the use of computer systems within the subsidiaries, and highlighting priorities in the establishment of an overall European systems strategy.

In addition to involvement in the systems area, other responsibilities will involve liaison between the UK Company and the European subsidiaries on a range of operational issues and problems.

We are sure you will agree that this is a rare opportunity for a young, ambitious Analyst, seeking a career position which is just a little bit special. Of course, the very nature of the position will involve a certain amount

of time away from home. We estimate that this would equate to about one month per year, comprising a number of expenses paid business trips of an average 1/2 days duration.

You will find that in addition to offering an extremely interesting and rewarding career path, our Client provides excellent terms and conditions of employment which include company car, bonus scheme and 25 days annual holiday, together with an attractive relocation package where applicable.

If you have broad-based business systems experience, enjoy travelling and meeting people and would like to join a successful and expanding Company, please forward a concise C.V. to Ian Payne at the SCR Birmingham office as soon as possible.

## We're Videcom

We're based in a superb new head office building in the beautiful riverside town of Henley. We're British. We're successful.

In the ten years since we started we've made a name for ourselves around the world by designing and manufacturing a unique range of micro computers and terminal systems.

We're still growing fast and we need more good people.

## We need Programmers £8,000 to £14,000

Programmers at all levels to work in a wide variety of Real Time micro processor assembler applications.

You will be based at our Head Office and the projects will include communications networks, terminal controllers and micro processor disc operating systems.

Specific experience in these fields would be advantageous but not essential for people with Real Time experience.

We'll pay you your worth and offer you the range of fringe benefits you'd expect from an International Company.

If you are right for this position ring Henley (04912) 78427 and ask for Sylvia Quedley

## Computer Manager

c. £12,000

J. E. Hanger & Co. Ltd., part of the major international health care group InterMed and a member of the BTR Group of Companies, is a light engineering company involved in the manufacture, repair and fitting of artificial limbs and appliances.

The Company runs an ICL System 10/220 machine for accounting and stock control, but requires to expand the applications into production control and several other areas. We are also currently considering updating the present systems thus obtaining larger hardware.

We are looking for an experienced professional to run our computer department and develop the new applications. Familiarity with ICL systems and the ability to program in Assembler and RPGII is essential. The successful applicant, male or female, will also be responsible for a private viewdata system currently being established.

Applications should be made in writing, giving details of past experience and salary to date to: Miss M. B. Kelleher, Personnel Development Manager, J. E. Hanger & Co. Ltd., Roehampton Lane, London, SW15 6PL. (15006)

**Hanger**

## COMPUTER OPERATIONS VACANCIES - LEEDS

Leeds Permanent is the UK's fourth largest Building Society with an expanding Management Services Function and a dual IBM 303x Installation based in Leeds. The Society has an impressive record of advanced computer system developments including a national on-line system to our branch network. MVS, CICS, SNA, IDMS components and IBM 3380 disks are installed. Plans include IBM 3083 processors and expansion of the telecommunications network to over 1500 terminals.

Additional staff are required to expand the Computer Operations team. The work is challenging and varied and offers the successful applicants the opportunity to work in an advanced computer installation, utilising the latest hardware and software.

### Shift Supervisor

The ideal candidate will have a minimum of five years experience of large IBM mainframe operations and will be fully conversant with MVS and CICS. Particular emphasis will be placed on supervisory and communication skills on both a management and technical level. A practical knowledge of JCL and utilities, together with experience of a large network operation is essential.

### Network Controller

Expansion of network services has created a vacancy for a bright, young operations professional to join an experienced team managing the daily operation

of its Society terminal network. Candidates will have spent at least two years in an advanced telecommunications environment. Sound knowledge of VTAM/NCP would be most useful.

### Benefits

The Society can offer excellent scope for career progression with the opportunity to be involved in the operation of advanced systems. In keeping with these challenging career opportunities, an excellent remuneration package is offered including contributory pension scheme, free life assurance and concessionary mortgage assistance.

Interested applicants should telephone Leeds 438181, Ext. 2373 for an application form and vacancy specification, quoting reference number CW 11/8/83 or write to:

Mr. J. Clark MBIM,  
Personnel Manager,  
Leeds Permanent  
Building Society,  
Permanent House,  
The Headrow,  
Leeds  
LS1 1NS.

Enquiries will be treated in the strictest confidence. Envelopes should be marked 'Staff-Confidential'.

**The Leeds PERMANENT BUILDING SOCIETY**

Interested in Operating Systems Software?

## Train for Software Training!

As one of the world's major minicomputer companies, we are committed to a programme of significant growth during the next 2 years.

We now require two people to join the Software Instruction team at our Customer Training Centre in South Harrow which specialises in the design and presentation of courses for our clients who require teaching in systems and software. Not just a customer service, but a profitable operation in its own right, the centre is fully equipped with the resources to undertake training in-house and on customer sites in the UK and overseas.

The ideal candidates will be of graduate-calibre with 12-18 months' experience in programming and system software, or experience in teaching a relevant subject, who require a new challenge and more job satisfaction.

The new MV/10,000 is the most powerful computer in Data General's Eclipse family. It is the fastest and best price/performance virtual memory 32-bit computer on the market.

After initial training, you will be given the opportunity to work very much on your own initiative designing and running courses and enjoying the benefits of exposure to a wide range of 16- and 32-bit systems. Through our outstanding training programme, you will be able to fully develop your natural abilities. An attractive salary and benefits package will be offered - future career prospects are first-class.

## ANALYST/PROGRAMMER

IBM S/34 & S/36

EUROPEAN TRAVEL

Molex is a fast growing multi-national manufacturer of electronic components, with its European headquarters at Aldershot. We have offices in all the major European countries to sell and distribute our products. Each office uses an IBM System/34 to handle commercial and accounting applications. We have plans to enhance existing applications; write new applications; to upgrade some to the System/36; and, to provide a telecommunications link-up.

We require an experienced analyst/programmer to help us in the achievement of these ambitious plans. Though based in Aldershot, he/she will travel to Europe frequently, sometimes at short notice. The ideal applicant will have proven experience in the design, programming and implementation of complex System/34 applications in RPG II. In addition, he/she will have a capacity for hard work; be self-motivating; and diplomatic.

The starting salary for this position is negotiable and will be commensurate to the experience of the successful applicant.

Please write, enclosing c.v., to:  
Miss Jan Drake, Molex EML, Church Lane East, Aldershot,  
Hants GU11 3ST.

(4847)

## IBM SYSTEMS PROGRAMMER

**NEW IBM 4341 INSTALLATION  
WEST SUSSEX**

**£13K + pa**

ICI Plant Protection Division is a leading company in the development and international marketing of crop protection products.

The Division makes extensive use of computers, and at our headquarters at Fernhurst we have two large Burroughs computers supporting a network of 150 on-line terminals and two remote job entry computers. At the end of this year, the Burroughs installation is being upgraded and a new IBM 4341/12 is being introduced.

The IBM 4341 will be used for personal computing and new application areas involving the use of advanced software for systems development.

We are looking for an experienced IBM Systems Programmer with good knowledge of MVS and CICS to make up a team of three who will be responsible for the IBM installation.

This is an opportunity to be involved in a new installation and to influence the choice of software in a dynamic environment. If you have at least two years' MVS experience and are looking for a challenging career opportunity, this could be the opening you are looking for.

We offer a competitive salary, contributory pension scheme, profit sharing, subsidised staff canteen and excellent recreational facilities.

If you are interested please apply to Mr. P. J. Thomas, ICI plc Plant Protection Division, Fernhurst, Haslemere, Surrey GU27 3JE.

## Technical Manager Appointments Pay Television

Racal Oak Limited recently established in the UK as a result of the significant growth of pay television services both in the UK and Europe now wishes to appoint the following key technical staff.

### Technical Manager

Responsibility is for the management of all Engineering and Systems activities which will involve significant liaison with Oak technical centres in Holland and California.

Prime areas of activity include the planning and installation of systems - both hardware and associated head end software; support to marketing/sales; control of field service and repair.

Candidates, educated to degree level, must possess a minimum of eight years relevant experience in

communication systems - ideally including television.

This appointment will offer the creative and commercially aware man or woman the opportunity to join a Company in its formative period and to play an active role in its future development.

### Senior Software Support Engineer

Responsibility here centres on support and installation of systems for pay television. These systems will include both control and business applications software.

The successful candidate will be involved in system design; system modification and customising; on site installation; technical support to sales.

Applicants, educated to degree level, should have gained at least five

years experience in a relevant environment ideally involving both interactive business applications and inter-computer communications.

The Company offers highly competitive salaries together with over five weeks annual holiday, pension and life assurance scheme and in the case of the Technical Manager a car. Assistance with relocation expenses will be provided in appropriate cases.

Please write enclosing details of age, experience, and present salary to: Ian Melrose, Personnel Manager, Racal Oak Limited, Richmond Court, 309 Fleet Road, Fleet, Hants.

**RACAL**

## New Opportunities in Information Processing LONDON

The National Coal Board Pension Funds are embarking on a major project to restructure and extend the computerisation of its investment administration facilities. This is a long-term phased plan involving the use of ICL hardware with IOMS/DDSS and associated with a TP network. As a result we now have the following opportunities:

### PROJECT LEADER £9,800 - £13,200

Candidates should have experience of leading a small team of programmers in the development of financial applications, and minimum of five years' experience in the practical use of COBOL, IOMS with DDS. Experience in a real-time environment of TPS would be an advantage. Ref: FY14A.

### PROJECT ANALYSTS £8,500 - £12,000

For one post the successful candidate will be required to undertake a leading role in the support of current and future systems, involving contact with user and software houses. Experience in a similar role would be an advantage, and experience of COBOL systems and program documentation is desirable. Ref: FY14B.

For the second post the successful candidate will have practical experience in the setting up and control of ICL's Data Dictionary System, preferably in an IOMS environment, and have at least three years' experience of COBOL in financial systems. Ref: FY14C.

For all positions candidates should have proven practical experience in the development of data based financial systems, ideally in an investment management environment.

Excellent benefits and conditions of service including generous leave. Location will initially be in the City - moving in the near future to the West End.

Please reply with full CV, quoting the appropriate reference number to:-

## EXCITING GROUND-FLOOR OPPORTUNITY EXPERIENCED ANALYST/PROGRAMMER FOR NEW DEVELOPMENT WORK HONEYWELL INSTALLATION, COASTAL LOCATION SALARY TO £10,000 A YEAR

Our client, who is part of a light engineering group, is located near the coast in East Sussex. They are starting to develop the company's sales, manufacturing and accounting systems on a Honeywell DPS8, using a mixture of packages (HOMS and HDFS) and in-house programs.

An experienced analyst/programmer is required to work on this project, initially under the guidance of a consultant, but eventually on his or her own. There is therefore a chance for a person with initiative to make a positive contribution to the overall direction of our client's systems, and to develop within the company.

The person selected is likely to have a minimum of four years' experience on Honeywell equipment, using COBOL. Some of this experience should have been on a major project in a manufacturing environment.

Please reply, enclosing a detailed CV and a brief letter explaining why you are the person for whom we are looking, to Shubrook Design Limited at:

All replies will be treated in the strictest confidence. (0080)

## TECHNICAL MARKETING CONSULTANTS - CAD/CAM

Suitably qualified people in the areas of Architecture/Construction, Mechanical Design and cartography are required to support the Marketing and Sales department.

Based in Cambridge the successful applicants will be responsible for technical sales support, system demonstrations and technical marketing documentation.

These very important positions attract a good salary and benefits package. A certain amount of travel will be necessary.

Applications in writing to:

Personnel Department  
Applied Research of Cambridge Limited  
Wellington House, East Road, Cambridge CB1 1BH (4885)

## NATIONAL ASSOCIATION OF CITIZENS ADVICE BUREAUX The Association currently has the following vacancy: MICRO-COMPUTER PROJECT MANAGER (3 YEARS)

This Association is currently implementing a Research and Development Project to introduce and appraise the application of micro-computers in a sample of CABs over a three-year period. The aim of the project is to determine whether micro-computers would improve the service offered by the Bureau to the public, and to identify and develop relevant software together with NACAB support staff and Bureaux.

The Project Manager will be responsible to the Director for the operation and management of the Project, including the management of 11 staff, and negotiation with central and local Government, fund raising from a variety of sources including sales of systems, liaison with the computer field, and in particular, liaison within the CAB services.

Applicants must have management and computing skills, together with a sound knowledge of advice and research work. The successful candidate will be based in Central London, but will be required to travel throughout the UK. A car owner/driver is essential. The post will be offered on a three-year contract.

Salary scale £10,079-£12,518 per annum plus £1250 London Weighting and a 6% non-pensionable supplement. Lunch vouchers, generous leave, contributory pension scheme.

For job description and application form please WRITE on a postcard to: Head of Personnel, N.A.C.A.B., 110 Brury Lane, London WC2B 5BW. CLOSING DATE: 31 AUGUST 1983. All applicants considered on basis of suitability for posts regardless of sex, race, marital status or disability. (4885)

## New Opportunities in Business Systems

Newport

The Plessey Business Systems Department at Newport is expanding to cope with the take-on of inhouse database systems running a VAX 11/780. This expansion is phased over a two year period. Vacancies now exist for the following:

**Senior Analyst Programmer (c. £10k)** to spearhead the development of financial systems based on digital equipment using COBOL and database reporting techniques.

Applicants should hold a degree or equivalent with approximately five years computing in a financial environment.

**Senior Operator (c. £9k)** to lead a small shift of Operators. A three shift rota is in operation covering a five day week with some weekend working. Applicants should have at least three years operating experience, one year of which should be on DEC hardware.

**Senior Programmer (c. £9.5k)** to control the development of programs on DEC hardware using COBOL as the main language.

Applicants should hold an HND or equivalent and have at least five years business computing experience.

In addition to stated salary, we offer excellent working conditions and big-company benefits.

Please ring or write for an application form to Mrs Marjorie Barnes, Personnel Officer, Plessey Marine Limited, Spytty Road, Newport, Gwent. Tel: Newport (0633) 270110.

**PLESSEY**  
electronic systems (4872)

## IBM Systems Programmers MVS in a Scientific Environment

The Computing Division of the Rutherford Appleton Laboratory runs a large scale computing service supporting several thousand scientific users both at the Laboratory and in universities throughout the UK. There is a mainframe complex consisting of an IBM 3081 and an ICL Atlas 10. These are connected to numerous distributed systems on an X25 network. The main batch operating system is MVT, with a conversion underway to MVS. The mainframe complex also contains an IBM 3032 which is being developed as a central SERC administration system using MVS/CICS.

There are vacancies for two Systems Programmers to help develop and support MVS. Experience of MVS (preferably with JES3) is necessary. CICS experience will be valuable for one of the posts. Applicants should have a degree or equivalent qualification in a scientific, mathematical or engineering subject.

The posts will be in one of the following grades, depending on qualifications and relevant experience:  
Higher Scientific Officer £7,149 - £9,561  
Scientific Officer £5,682 - £7,765

Some assistance with the expenses incurred in house sale/purchase may be available. The Laboratory is a friendly community with its own restaurants and sports facilities nearby. Benefits include a local transport service, sick leave allowance and generous holidays. Application forms from: Recruitment Office, Rutherford Appleton Laboratory, Science and Engineering Research Council, Chilton, Didcot, Oxon OX11 0QX. Tel: Abingdon (0235) 445435 quoting Ref: VN 156. Closing Date: 1st September 1983

**SERC** Rutherford Appleton Laboratory (4882)

## PROGRAMMER/ANALYST WITH MANUFACTURING BIAS

Rapidly expanding, soundly based manufacturing and distribution company with 300 employees seeks a programmer/analyst to further develop software for ICL System 25 and computer services in general.

The successful candidate will be between 25 and 40 years of age with at least 2-3 years experience and a sound educational background. He or she will be capable of working independently and communicating with people at all levels. High standards, particularly in the presentation of documentation, are a prerequisite. Remuneration will be commensurate with age and experience.

Please apply in writing and in confidence to:

A. K. Brown, FCA  
C. Robinson and Company Limited  
Tenbury Wells  
Worcestershire (4817)

## INTERNATIONAL BANK, LONDON

Programmer/Analyst to: £11,000 + benefits  
RPG Programmer to: £9,000 + benefits

### Development Opportunities on SI38

Our client, based in NW London only three minutes from the tube, is currently engaged in a major development programme and need two more members for their small, friendly team.

DP facilities are provided by an IBM SI38 Model 7 at the Computer Centre supporting 45 terminals in six branches.

A second SI38 will be delivered shortly for the exclusive use of the Development team. The dynamic environment offers successful candidates every opportunity for career advancement.

Both positions require good RPG skills. Applicants for the senior position will have experience in program specification and file design.

Banking experience is not essential, but applicants with a knowledge of KAPITI will have a distinct advantage.

### Benefits include:

- ★ Subsidised mortgage
- ★ Low cost loans
- ★ Free banking
- ★ Free medical insurance
- ★ Paid overtime
- ★ Interest-free season ticket loans
- ★ Luncheon vouchers

**MSA**  
The Software Company

## TERRITORY SALES EXECUTIVE

MAIDENHEAD, BERKSHIRE

Substantial Earnings Package\*, Quality Car (Rover, Volvo, Audi) + Benefits

Here is your opportunity to join MSA Limited, the world's leading supplier of packaged applications software. You will almost certainly know of MSA by reputation. Their products are second to none; their sales and support staff are amongst the best in the business.

Continuing success and expansion have led to a recent move to larger and even more prestigious offices in Maidenhead, and have created the need for one more Sales Executive with responsibility for selling the whole range of financial/commercial packages - GENERAL LEDGER, ACCOUNTS RECEIVABLE, ACCOUNTS PAYABLE, PURCHASE ORDER CONTROL, INVENTORY AND PURCHASING, FORECASTING AND MODELLING, FIXED ASSETS ACCOUNTING.

The position is based in Maidenhead.

Quite simply, you must have a first-class track record in sales, gained in the relevant application areas, probably in a bureau or timesharing environment.

Your ability to negotiate at the highest levels and your disciplined and professional approach to selling will have ensured that you are already successful and enjoying high earnings. We suggest that you build on that success by joining a company whose reputation and growth are exceptional and whose plans for the future will ensure the best possible career prospects for high fliers.

It's likely that, because of the qualities we seek, you will be in the age range 28-42.

\* WE BELIEVE THAT THE EARNINGS PACKAGE AVAILABLE IS THE BEST CURRENTLY AVAILABLE IN THE COMPUTER SERVICES MARKETPLACE.

Please contact MARK IRENS for further information on these top sales positions.

SPECIALIST RECRUITMENT CONSULTANTS

## Computer Aided Design

Balfour Beatty Engineering provides consultancy and project management services in civil engineering, electrical engineering and all types of industrial processes. With a main Design Office at Sidcup, our operations are international. The computing equipment in use is the PDP 11 series with RSX 11M operating system using Fortran plus Macro 11 languages.

### Systems Engineer

To strengthen our CAD team we now require a Systems Engineer to work on system configuration and software design which will include our Computer Aided Design package and comprehensive database and reporting functions. He/she will supervise the day-to-day operation of the hardware.

### Programmer

We also require a Programmer to produce and test the software for CAD and engineering computations. Day-to-day operation of the hardware will be involved.

The people we require must have experience in this work and must be familiar with the computing equipment and languages used. Knowledge of other languages and operating systems would be helpful.

Both posts are based at Sidcup. Competitive salaries are offered with relocation expenses if required. The company has a staff luncheon club and a sports and social club. Working hours are flexible.

Find out more. Send your c.v. to Jack White, Personnel Manager, Balfour Beatty Engineering Limited, Marlowe House, Station Road, Sidcup, Kent DA15 7AU. Tel: 01-300 3365. Please quote Ref. 624.

## If you've experience of working with VAX or PDP systems under VMS or RSTS/E come to DIGITAL...and start succeeding

Digital is the world's no. 1 minicomputer manufacturer, with an advanced range of best-selling systems and a number of major new product launches in the pipeline. We are obviously looking forward to a very successful future and in line with our continued growth, we are now looking to strengthen the team in our Field Service Data Centre based at our UK Head Office in Reading, where we are about to add a new VAX 11/780 to our existing PDP 11/70S. To be more specific, we need the following people:

### Systems Support Analyst

Reporting to the Data Centre Manager, you'll join the Field Service Operations Group at this modern facility. Within this team, you'll be responsible for the implementation, maintenance and technical support of software for distributed systems at our field service branches throughout the UK and Ireland, as well as the support of systems run at the Centre. The role will obviously necessitate liaison with Branch personnel for which some travel will be necessary.

We are looking for someone who is perhaps currently working in a similar position or has an in-depth knowledge of computer operations in a similar environment. What is essential, however, is that you have a thorough understanding of running VAX or PDP systems under VMS or RSTS/E, together with well-rounded user liaison skills and the ability to work effectively with the minimum of supervision. Programming in Basic + 2 would be an added advantage. REA/7C3/565.

### Computer Operator

Reporting to the Operations Supervisor, you'll work closely with the Senior Operator in the day-to-day running of the Centre's systems and applications. With the impending arrival of a new VAX 11/780, you can expect to be involved in helping to run this impressive system.

To match our expectations, you should be a competent operator with at least 12 months' experience of running VAX or PDP systems under VMS or RSTS/E. REA/7C3/563.

For both of the above positions, the rewards of joining Digital are excellent. We offer attractive salaries backed by a full range of valuable benefits including pension and life assurance schemes, sports and social club as well as a subsidised staff restaurant. And for the ambitious, the prospects for rapid career

development within our successful and expanding organisation are excellent. If you'd like to work with Digital, write giving brief career details to: Stewart Townsend, Data Centre Manager, Digital Equipment Co. Limited, Digital Park, Reading, Berks. Tel: Reading (0734) 868711 ext. 3870.

## DEC PDP11 & MICRO-BASED CONTROL SYSTEMS

WORCESTERSHIRE

### REAL-TIME PROGRAMMERS

c£9.5K plus Relocation Assistance

Experienced programmers, ideally with a minimum of 12 months DEC RSX11 and MACRO experience, are required for the development of software for a variety of projects. These include advanced production control and materials handling systems, and systems for engineering and security applications.

We are interested in hearing from committed programmers with MINI and/or MICRO real-time systems experience, or people with good general programming skills wishing to advance their careers. You will join an expanding DEC systems and software house with a fast developing Special Projects Group and must be able and willing to work on occasional single person projects or as members of a team.

Rewards in terms of the variety of work and the opportunity for the projection of effort, are equalled by the prospects for excellent career and salary advancement for the right people.

Applicants should write with C.V. or request for an application form to Digby Dyke, Managing Director, at the address below, or telephone him on Worcester (0905) 611512 office hours or Malvern (06845) 2210 evenings and weekends.

Computer Personnel & Executive Development Associates Ltd.  
Old Bank House, Bank Street, Worcester WR1 2EW.

## Sales Executives

### Data Communications Basingstoke

The Data Communications Division of IAL has built an enviable reputation for the design and installation of advanced telecommunications systems for worldwide markets. Considerable business expansion demands that we must strengthen our UK sales team.

### Area Sales Executives

Salary negotiable + bonus + car

We need Area Sales Executives to be responsible for the development of sales for our Data Communications systems and products, including network management systems, modems, multiplexers, branching panels etc., for key areas in London and the Home Counties.

Applicants, who should be resident in the areas, need not have direct data communications selling experience. Sales Engineers specialising in related areas will be considered. Ref. K125/01.

### Internal Sales Executives

Excellent negotiable salary

These positions are ideal for young engineers who wish to enter into a sales career. The work involves backing our field sales team and being responsible for the telephone sales and promotion of our new exciting low cost products. Ref. K125/02.

We offer excellent conditions of service which include five weeks holiday, pension and life assurance schemes.

If you feel you can match the challenge of our requirements telephone the Senior Recruitment Officer on 01-574 5134 or send your c.v. to him at IAL, Aeradio House, Hayes Road, Southall, Middx UB2 5NJ, quoting the appropriate reference.

### THE HIGH TECHNOLOGY TASK FORCE

AVIATION SYSTEMS AND SERVICES-WORLDWIDE

## PROJECT MANAGER GLASGOW

£16,000 Neg. + COMPANY CAR

A leading group of companies in Scotland have produced a five year development plan to meet their Information Technology requirements. An experienced D.P. professional is now required, who will operate at Project Manager/Internal Consultant level. Responsibilities will include Project Management, feasibility studies and consultancy services to companies within the group, including senior non-DP user management.

The successful applicant must have a good working knowledge of Database and On-line systems. He or she should have demonstrated and meaningful experience in several of the following areas: Project Management, Feasibility studies, Telecomm Networks and extensive systems experience on mainframes or large minis. Previous experience with a computer supplier, software house or consultancy would be highly desirable.

For further information about this position and the excellent package of benefits, telephone or write with brief details to Alex Daley at our Glasgow office.

## RPG II/III

**RPG III NORTH LONDON To £12,500**

We currently have an expanding, established finance company in North West London. Housing an IBM System 38 they require 18 months + RPG III experience, the ability to fit in with a friendly team, and take responsibility for major development projects. Superb offices and excellent financial rewards. REF. C/2696

**RPG II EAST LONDON To £12,000**

A first-class opportunity to join this international company who are the leaders in their field. They are seeking to recruit a good Programmer/Analyst with IBM System 34 RPG II background. Self-motivation and a mature outlook are the essential requirements for this exciting position. Excellent career prospects along with the possibility of some European travel. REF. G/2657

**IBM SYSTEM 38 LONDON To £13,000**

We currently have 6 software houses in the Central London/City area seeking your RPG III expertise. If you are bright and a good communicator, then 12 months + experience will be considered. There are also more senior roles available for Analyst/Programmers with design and implementation experience. Most of your work will be London based. REF. C/4813

**ANALYST/PROGRAMMER LONDON To £11,000**

Due to continued company expansion, this leading manufacturing concern, are seeking an additional IBM S/34 RPG II Analyst/Programmer. This position is ideal for someone with indepth S/34 skills. The work is 35% on-line development, with the possibility of the company upgrading to an IBM System 38 in the near future. Benefits include sub/restaurant and interest free season ticket loan. REF. G/2651

**IBM SYSTEM 34 CITY £12,000**

This is an Analyst/Programmer role requiring 3 years + IBM System 34/RPG II, and strong analysis skills. The ability to lead a small group would be advantageous, and the desire to progress fairly rapidly to a senior position. Some opportunity to work with Micros in COBOL. REF. C/2589

**IBM SYSTEM 38 RETRAIN c.£12,000**

Very strong IBM System 34/RPG II technical skills are required for this outstanding opportunity. Retraining on the IBM System 38 will be immediate and you will be involved with the implementation and support of various systems. Good user contact would be an added advantage as would the ability to speak French, although not essential. For more information on the position please contact me. REF. G/2092

**RPG III CITY To £13,000**

Highly reputed software house, with large multi-national clients, requires additional IBM System 38 consultants with the ability to liaise with people at all levels, including financial directors. Excellent RPG III skills coupled with a good business awareness are the main requirements. You will be working on major development projects and training in analysis will be given. In addition you will be well rewarded in terms of salary and benefits. REF. G/1390

## IBM OPPORTUNITIES

**PROGRAMMER/ANALYST EAST LONDON/ESSEX To £9,500**

Can you offer a minimum of 12 months' IBM COBOL and/or ASSEMBLER experience? If so you will become involved with the development of a major insurance system. The company retain an IBM 4341 under DOS/VSE using CICS and DL/I, and CICS training will be given where necessary. The ideal candidate would be self-motivated, and seeking real career advancement. Benefits include sub restaurant, non-contributory pension scheme, BUPA, and sports and social club. REF. G/1245

**CICS PROGRAMMER LONDON c.£11,000**

World-wide distribution company requires a programmer with a minimum of 2 years' IBM COBOL, and 6 months' CICS experience. This is a super opportunity to work on a database development team utilising IBM 4341, DOS/VSE, CICS and DL/I, and you will be involved in International Systems Development. Positions are also available for Analyst/Programmers with 2 years' IBM COBOL, and a programmer who would like to move into a systems analysis role. Call me for full details. REF. C/2649

Brushfield House, 12 Brushfield Street

## PROGRAMMERS/ ANALYST PROGRAMMERS

System 38 - Middlesex  
to £13,000 + Benefits

Planned expansion into new business areas has meant a 100% increase in turnover for the U.K. subsidiary of a well-known American insurance group. This continuing growth has necessitated the upgrade from twin System 34s to a System 38. To help bring the software into line with the new hardware they now need to recruit three experienced System 38 professionals.

The senior position calls for an Analyst/Programmer with good technical and communications skills gained within the G.S.D. environment. Previous supervisory experience and some knowledge of financial systems would be an advantage. Programmers should have two years' experience and be looking to develop in a project environment. In both cases candidates must have at least one year's exposure to RPG III on the System 38 and be capable of supporting a widespread user group.

Salary is negotiable according to age and experience and is accompanied by the sort of benefits package normally associated with an international group. The real benefit, however, will be the opportunity to grow with a rapidly expanding company.

Call David Mason Johns today on 01-948 5922 (24-hour answering service) on 01-747 0969 (evenings or weekends) for an application form. Alternatively write to him at the address below. Please quote Ref. 8166/CW.

## A NEW COMPANY WITH 15 YEARS OF ACHIEVEMENT

### FORTAN ANALYST/PROGRAMMERS TO £12,000 pa CAMBRIDGE

CADCentre Limited is an exciting new company which has evolved from one of the most respected CAD/CAM development organisations in the country.

With Government support, the Company has been restructured and, backed by three major British Companies, CADCentre Limited is poised to attack the CAD/CAM market from the secure base of on-going contracts. Their engineering design and graphics products already lead the field.

Existing commitments to refine and extend these products, and also to develop further equally

successful software, have created the need for a number of skilled Analyst Programmers.

The successful applicants will have either a Degree or HND in an Engineering, Computer Science or Mathematics discipline together with the ability to produce accurate results quickly in FORTRAN. However we are not seeking just Programmers, we need problem solvers with the ability to communicate with users, identify the requirement and then 'stick with it' until the solution is found. Although a team structure exists a high level of flexibility and self motivation are sought after assets.

**CADCentre  
Limited**

The modern offices are set in a rural location on the outskirts of Cambridge. The University City has excellent shopping, sports and cultural facilities with housing at reasonable prices both in the City and the surrounding villages. Communications are excellent with easy access to the East Coast, The Midlands and London.

Salaries of up to £12,000 pa, flexible working hours and relocation assistance (where appropriate) will make moving to Cambridge easy and enable you to enjoy the lifestyle that CADCentre, the City and the countryside can offer.

So if you want to develop your career in a dynamic new company with a secure future in the growing market of CAD/CAM, telephone or return the coupon below and we will send you an Application Form and full Company Profile.

# PUBLIC SECTOR APPOINTMENTS

## Systems Manager

Salary £13K to £14K

The Agency is seeking a person to head a small group that will assume responsibility for the management of its computer operations, including liaison with various user departments and the design and development of future systems.

The Agency has a range of functions including financial investment and monitoring, construction, marketing, and management of factories including design and the provision of numerous advisory services; overlying all the financial controls necessary within a business of some £80 m. turnover.

The successful candidate will be able to demonstrate a good appreciation of business practice and the ability to manage the computer operations of the Agency. Applicants should have considerable experience of:

- ON LINE operations
- multi-user, mini computer systems work
- enquiry systems
- programming experience

It would be an advantage to have knowledge of integrated systems operating in the Public Services sector.

Salary will be within the range quoted with six weeks annual holiday in addition to public holidays. There is a contributory pension scheme and a car user allowance.

Assistance with relocation expenses will be given where appropriate. Applications for this post are invited by 31 August 1983 (closing date). Please write in confidence giving career and personal details, or telephone for an application form quoting reference PD/83/14.

Telephone (044 385) 3571.

**UMIST**  
**ANALYST PROGRAMMER**  
Applications are invited from suitably qualified Analysts or Programmers for a permanent appointment in serving the administration of the Institute. It is likely that the successful candidate will either be a Systems Analyst with recent experience of programming or a Programmer interested in developing his/her career in systems analysis. The Institute operates an ICL 2904 with tape, discs and on-line terminals. The main programming language is COBOL while extensive use is made of FILETAB. The appointment will be made on the SAC IA grade on a salary scale £6,310-£11,618 with placing according to age and experience. Membership of the USS pension scheme is a condition of appointment. Requests for application forms and further particulars, quoting reference B/17/B/C, should be sent to The Registrar, Room 80, UMIST, PO Box 88, Manchester M60 1QD. The closing date is 26 August 1983. (4899)

## Computer Auditor

based in Reading  
£11,184-£12,408

A computer audit specialist is required to join a small team within the Internal Audit Section. The Authority uses a Region-wide network of PRIME computers and is currently developing a major ICL 2260/2988 configuration which will support a large teleprocessing network. Audit activities range across all aspects of computing, including the examination of systems during and after development, audits of computer centres, technical audits of system software and the development of audit software.

Candidates will be expected to be experienced computer analysts/programmers or accountants with a sound practical knowledge of computing. An understanding of the role of Internal Audit, together with the ability to criticise constructively and communicate effectively are considered essential. The post involves some travelling within the Region and applicants should hold a current driving licence.

Benefits include a superannuation scheme, generous holidays, flexible working hours, staff canteen, good social and sporting facilities.

Applications, giving full details of qualifications and experience, together with the names of two referees, should be submitted to the Regional Manager (Manpower), Nugent House, Vester Road, Reading RG1 8DB by Friday 28th August 1983, or phone Derek Dunn on Reading (0734) 593337 for an informal talk.

## Thames Water

**Islington**  
Finance

## COMPUTER SYSTEMS DEVELOPMENT MANAGER

PO6 £15,168 to £16,491 inclusive

A unique opportunity arises to manage an ambitious development programme following promotion of the existing post holder.

Islington has a strong computer development schedule with a major thrust towards database systems and a firm commitment to be out of 1990 emulation by April 1985.

The Council has just approved the purchase of 2 x ICL 2988s of 16 megabytes and 1 x ICL 2955 of 3 megabytes plus an extensive network of DRS terminals and work stations.

Ambitious and resilient candidates who must have had at least four years' experience in the middle management of a large D.P. department and be able to demonstrate a successful track record in systems development and implementation can obtain an application form from Director of Finance (Admin. Section), Town Hall, Upper Street, London N1 2UD (Tel. 01-228 1234, ext. 315 or 449). Please quote reference: FC.141. Closing date: September 2, 1983.

Our jobs are open to all races and both sexes and we have a positive attitude towards employing disabled persons. (5077)

## PORTSMOUTH POLYTECHNIC COMPUTING CENTRE

### LECTURER/SENIOR LECTURER

The National Advisory Board for Local Authorities Higher Education has approved an expansion of courses in information technology in the computing Centre. As a consequence of this approval, applications are invited from good Honorary Graduates, with recent research or industrial experience, to contribute to teaching and research activities in the following areas:

- Programming and Programming Methods
- Data Organisation and Processing
- Information Technology
- Information Systems
- Software Engineering
- Expert Systems

Salary scale £7,215-£12,443 p.a. Application forms and further particulars from the Personnel Office, Portsmouth Polytechnic, (Nuffield) Centre, St Michael's Road, Portsmouth PO1 2ED. Tel: (0705) 825461. Please quote Ref. P4. Closing date for applications: 28 August 1983. (4865)

## THE UNIVERSITY OF TASMANIA

### SENIOR LECTURER/LECTURER IN COMPUTER SCIENCE

Applications are invited for the following lectureship posts available from the beginning of the 1984 academic year: The University of Tasmania is the only university in Australia's island state and offers a wide range of disciplines. It has an established reputation for excellence in science. The Department of Information Science is responsible for the provision of information science education and research to the university and for research in computing. It has been active in the development of PERSONAL and technology transfer in an international sense. Research interests cover microprocessor software, personal systems, databases, networking, theoretical computer science, etc. The successful candidate will be required to teach and supervise research in these areas and to contribute to the development of the Department through the supervision of research students, or knowledge of computer science in hardware aspects of computing, theoretical computer science, or knowledge of computer science in hardware aspects of computing. Salary range: Senior Lecturer \$40,000 - \$45,000 p.a.; Lecturer \$32,000 - \$37,000 p.a. Applications should be sent to the Department of Information Science, University of Tasmania, Box 252, B.P.O. Hobart, Tasmania, Australia 7501, or from the Association of Commonwealth Universities (ACU), 25 Bedford Square, London WC1N 3AU. Application plus 28 September 1983. (4862)

**POLYTECHNIC OF THE SOUTH BANK**  
Borough Road, London SE1 0AA

## MANAGER INFORMATION TECHNOLOGY CENTRE

Salary up to £14,000 p.a.

The POLYTECHNIC OF THE SOUTH BANK in association with the BOROUGH OF WANDSWORTH is proposing to sponsor, subject to the formal approval of the MSC (under the YTS Scheme), an Information Technology Centre at Manor House, Clapham Common. The Centre will provide work experience and training for young people in micro processor and computer applications.

We are seeking a person with appropriate management experience and with knowledge of relevant production and marketing techniques to manage the Centre. The initial appointment would be for a period of 18 months with the possibility of further extension.

Application forms and further particulars are available from the Staffing Office, Tel: 01-928 8989 ext. 2365.

Application forms should be returned by 31st August 1983 and it is expected that preliminary interviews will be held in mid-September to suit the convenience of applicants. (4822)

## FINANCE DEPARTMENT DATA PROCESSING MANAGER

GRADE PO1-4 (£11,993-12,941 inclusive)

Shetland Islands Council is seeking to appoint as a Data Processing Manager a commercially orientated D.P. professional to head the authority's central computing facilities. The Computer Section provides systems development, operational and data processing services to user departments.

The authority currently has installed both a CMC Sovereign Micro Computer and a CMC Reality Mini Computer with a number of remote sites performing local processing. There is a commitment to the installation and development of on-line, interactive systems.

A number of individual Micro Computers have also been recently introduced.

This is a senior appointment and should provide a unique opportunity to a DP professional wishing to move from a Project Leader or Senior Analyst/Programmer role into DP management.

Experience in the field of on-line interactive systems is essential as well as the ability to communicate effectively at all levels within the organisation.

Benefits include a normal 34 hour working week, repayment of removal expenses less £50 and the possibility of Council housing.

Shetland offers a stimulating environment with an opportunity to enjoy outdoor and family pursuits.
